TEKTRONIX
T5511P

Revision A

8/1/62

The Tektronix Type T5511P is an aluminized 5-inch flat-faced cathode ray tube with electrostatic focus and deflection and a helical post-accelerator. Two identical electron guns with separate DJ₃-DJ₄ deflection systems share a common DJ₁-DJ₂ deflection system. The T5511P was designed for use in the Tektronix Type 551 Oscilloscope.

NOTES:

1. Data applies to both A and B guns separately unless otherwise noted.
2. DJ₃-DJ₄ scans overlap 2 cm.
3. DJ₁-DJ₂ center at geometric center of tube. DJ₃-DJ₄ offset 1 cm from geometric center giving 2 cm total separation between A and B guns.
4. Lower helix and isolation shield are connected internally. Pattern distortion minimal with proper potential.
5. Adjustment of DJ₃-DJ₄ deflection shield voltage improves linearity of DJ₃-DJ₄ deflection by controlling edge effect of DJ₃-DJ₄ plate field.
6. The deflection plates intercept part of the electron beam near the edge of scan; therefore, a low impedance deflection drive is desirable.
