## TEKTRONIX

## Reference Guide to

## $40=5$

## OPERATORS

$\left.\begin{array}{lccc}\text { Arithmetic } & \text { Operator } & \text { Example } & \text { Result } \\ & \uparrow & 3 \uparrow 2 & 9 \\ & * & / & 4 * 3\end{array}\right) 12$

## ASSIGNMENTS

## Numeric

LET
LET A = 5
$\mathrm{Y}=\mathrm{X} \uparrow 2+3 * \mathrm{X}+5$

Assigns the numeric constant 5 to the variable $A$.

Assigns the result of the numeric expression $X \uparrow 2+3 * X+5$ to the variable $Y$.

## String

| DIM DIM A\$(8),B\$(200) | Dimensions A\$ to 8 char- <br> acters maximum and B\$ <br> to 200 characters maximum. |
| :--- | :--- |
| LET LETC\$ = "Bob Edge" |  | | Assigns the string "Bob |
| :--- |
| Edge" to C\$. The variable |
| C\$ is automatically dimen- |
| sioned to 72 characters if |
| not previously dimensioned. |

Array

| DIM $\quad$ DIM $X(12), Y(2,2)$ | Dimensions $X$ as a 12 <br> element single dimension <br> array and $Y$ as a two by <br> two matrix. |
| :--- | :--- |
| LET | LET $X(1)=\operatorname{SiN}(45)$ |
| Assigns the sine of 45 (de- <br> grees, radians, or grads) to <br> the first element in array $X$. |  |
|  | Assigns the same random <br> number between 0 and 10 <br> to each element in array $Y$ |

## ENVIRONMENTAL

| INIT | INI | Returns the system environmental parameters to a known state. |
| :---: | :---: | :---: |
| FUZZ | FUZ 5,1.0E-10 | Sets the comparison standard for non-zero numbers to 5 digits and the standard for zero comparisons to $\pm 1.0 \mathrm{E}-10$. |
| SET | SET RADIAN | Sets the trigonometric units to radians. |
|  | SET DEGREE | Sets the trigonometric units to degrees. |
|  | SET GRAD | Sets the trigonometric units to grads. |
|  | SET KEY | Enables the user-definable keys during program execution. |
|  | SET NOKEY | Disables the user-definable keys during program execution. |
|  | SET TRACE | Sets the trace debugging feature. |
|  | SET NORMAL | Disables the trace debugging feature. |
|  | SET CASE | Lower case letters are equal to upper case letters. |
|  | SET NOCASE | Lower case letters are not equal to upper case letters. |
| "ALPHAFONT" | PRI @32,18:0 | Selects U.S. Font. |
|  | PRI@32,18:1 | Selects Scandinavian Font. |
|  | PRI @32,18:2 | Selects German Font. |
|  | PRI@32,18:3 | Selects General European Font. |
|  | PRI @32,18:4 | Selects Spanish Font. |
|  | PRI @32,18:5 | Selects Graphics Symbols Font. |
| "Tape Status" | PRI @33,0:0,0,0 | 256 byte physical record, checksum, header format. |
|  | PRI@33,0:1,1,1 | 128 byte physical record, no checksum, non-header format. |
| "PAGE FULL" | PRI@32,26:0 | Blinking " $F$ " |
|  | PRI @32,26:1 | HOME |
|  | PRI@32,26:2 | PAGE |
|  | PRI@32,26:3 | COPY and PAGE |

## DELIMITERS

## ASCII I/O Delimiters

PRI @37,26:0 Sets Carriage Return (CR) as the delimiter for all ASCII Input/Output operations. An "at" sign (@) must be specified in the I/O address.

PRI @37,26:1 Sets Carriage Return/Line Feed (CR/LF) as the delimiter for all ASCII Input/ Output operations. An "at" sign must be specified in the I/O address.

## Alternate Delimiters for INPUT, OLD, and APPEND

PRI @37,0:3,4,7 Sets the alternate record separator to decimal 3 (ETX End of Text), the alternate End of File mark to decimal 4 (EOT End of Transmission), and the character to be deleted to decimal 7 (BEL Bell). These delimiters are used in INPUT, OLD, and APPEND operations when a percent sign (\%) is specified in the I/O address.

## PROGRAM CONTROL

| RUN | RUN | Places the system under program control. |
| :---: | :---: | :---: |
| STOP | STO | Stops program execution. |
| END | END | Ends program execution. |
| FOR 100 | FOR I=1 TO 10 STE 2 | Executes the statements between lines 100 and 500 five |
| NEXT 500 | NEXI | times. |
| GO TO | GOTO 500 | Transfers control to line 500. |
|  | GOTO $\times$ OF 100,200 | Transfers control to line 100 if $X=1$ or to line 200 if $x=2$. |
| GOSUB | GOS 2000 | Transfers control to line 2000, the beginning of a subroutine. |
|  | GOS $\times$ OF 100,200 | Transfers control to line 100 if $X=1$ or to line 200 if $x=2$. |
| RETURN | RET | Returns control to the statement following a matching GOSUB or returns control to the GS keyboard. |
| IF... THEN | IF $A=B$ THEN 360 | If the value of $A$ equals the value of $B$, then control is transferred to line 360. |

## SYSTEM CONTROL

## System Control

| CALL | CAL "FIX IT",M,R,W | System control is passed to a routine called "FIX IT." The data items assigned to the variable $M, R$, and $W$ are passed to the routine as the routine executes. |
| :---: | :---: | :---: |
| COPY | COP | Causes an attached Hard Copy Unit to make a paper copy of information on the GS display. |
| HOME | HOM | Returns the GS display cursor to the home position. |
|  | HOM @16: | Sends a HOME command to device number 16 on the GPIB. |
| PAGE | PAG | Erases the GS display and returns the cursor to the home position. |
|  | PAG @16: | Sends a PAGE command to device number 16 on the GPIB. |
| ON...THEN | 10 ON SRQ THE 50 | Transfers control to line 50 when SRQ (Service Request) is activated on the GPIB. |
|  | 20 ON EOI THE 60 | Transfers control to line 60 when EOI (End or Identify) is activated on the GPIB. |
|  | 30 ON EOF (0) THE 70 | Transfers control to line 70 when an End of File character is found on the internal magnetic tape. |
|  | 40 ON SIZE THE 80 | Transfers control to line 80 when a size error occurs. |
| OFF | OFF SRQ | Disables the response to SRQ (Service Request). |
| POLL | POL A,B;5;10;15 | Executes a serial poll for devices 5,10 , and 15 on the GPIB in that order. Returns a 1 to the variable $A$ if device 5 is requesting service, a 2 if device 10 is requesting service, and a 3 if device 15 is requesting service. The peripheral status byte is assigned to $B$. |
| WAIT | WAI | Delays program execution until an SRQ, EOI, EOF, or SIZE interrupt occurs. |

## PROGRAM EDITING

| LIST | LIS | Lists the current BASIC program on the GS display. |
| :---: | :---: | :---: |
|  | LIS 300 | Lists line 300 on the GS display. |
|  | LIS 300,400 | Lists lines 300 through 400 on the GS display. |
|  | LIS@16: | Sends a list of the current BASIC program to device number 16 on the GPIB. |
| REMARK | REM Fetch Data | Indicates the next routine is a fetch data routine. |
| RENUMBER | REN | Renumbers all program lines in memory starting with line number 100 . The new numbers start at 100 and increase with an increment of 10. |
|  | REN 2000,5,90 | Renumbers all program lines in memory starting with line number 90 . The new numbers start at 2000 and increase with an increment of 5 . |
| Memory Management |  |  |
| DELETE | DEL A,B,C\$ | Deletes the variables $A, B$, and C\$ from memory. |
|  | DEL 100,200 | Deletes program lines 100 through 200 from memory. |
|  | DEL ALL | Deletes all program lines and variables from memory. |
| MEMORY | MEM | Returns the number of free bytes remaining in memory. |
| SPACE | SPA | Returns the number of bytes required to store the current BASIC program in external ASCII format. |
| Memory Allocation |  |  |
| Numeric variable $=13$ bytes |  |  |
| String variable $=($ string dimension +18$)$ bytes |  |  |
| Array variable $=(($ no. of rows $\times$ no. of columns $\times 8)+18)$ bytes |  |  |

## MATH FUNCTIONS

| ABS | (x) | Returns the absolute value of $X$. |
| :---: | :---: | :---: |
| EXP | $(X)$ | Returns the value of the base e raised to the $X$ power ( $e^{x}$ ). |
| INT | ( X ) | Returns the largest integer without exceeding $X$. |
| LGT | $(x)$ | Returns the logarithm of $X$ to the base 10. |
| LOG | $(X)$ | Returns the logarithm of $X$ to the base $e$. Returns 3.14159265359 |
| PI | ( X ) | Returns 3.14159265359. <br> Returns a random number between 0 and 1. |
|  |  | $x>0$ Fixed starting point. <br> $x=0$ Reset to fixed starting point. <br> $-1<x<0$ Selectable starting point. <br> $X \leqslant-1$ Random starting point. |
| SGN | (X) | Returns +1 if $X$ is positive, 0 if $X$ is 0 , and -1 if $X$ is negative. |
| SQR | (X) | Returns the square root of $x$. |
| Trigonometric Functions |  |  |
| SIN | $(X)$ | Returns the sine of $X$. |
| COS | $(X)$ | Returns the cosine of $X$. |
| TAN | (X) | Returns the tangent of $X$. |
| ASN | $(x)$ | Returns the arc sine of $X$. |
| ACS | $(X)$ | Returns the arc cosine of $X$. |
| ATN | (X) | Returns the arc tangent of $X$. |

NOTE: The result returned by each trigonometric function depends on the RAD, DEG, GRAD environmental parameter. See SET under ENVIRONMENTAL.

## Matrix Functions

SUM (X) Returns the algebraic sum of the elements in array $X$.

## User-Definable Functions

DEFFN 100 DEF FNA $(X)=5 \uparrow \times$| Defines the function of $A$ as |
| :--- |
| $5 \uparrow X$. |

\[\)| $110 \mathrm{~J}=\mathrm{FNA}(7)$ |
| :--- | |  Evaluates the function of $A$ |
| :--- |
| $(5 \uparrow X) \text { using } 7 \text { for the value }$ |
|  of $X . \text { The result }(78125) \text { is }$ |
|  assigned to the variable $J .$ |

\]

## GENERAL INFORMATION

Numeric Accuracy $=14$ digits
Numeric Range $= \pm 8.988 \mathrm{E} \pm 307$
Numeric Variables A, AO - A9
and
Array Variables
Z,Z0 - Z9
String Variables $\quad A \$-Z \$$

Parenthesis (), Braces $\}$, and Brackets [] are treated the same.

DISPLAY CONTROL

| Control <br> Character | Keyboard <br> Input | Displayed <br> Character | Function <br> Performed |
| :---: | :---: | :---: | :--- |
| BELL <br> (BELL) | CTRL G | $\underline{G}$ | Rings bell |
| BS <br> (Backspace) | CTRL H | $\underline{\text { G }}$ | Backspaces the cursor |
| HT <br> (Horizontal tab) | CTRL I | $\underline{\text { I }}$ | Tabs cursor to next tab <br> stop |
| LF <br> (Linefeed) | CTRL J | Moves cursor down <br> one line |  |
| VT <br> (Vertical tab) | CTRL K | $\underline{\text { K }}$ | Moves cursor up one <br> line |
| FF <br> (Form feed) | CTRL L | Erases screen and moves <br> cursor up to Home |  |
| CR <br> (Carriage Return) | CTRL M | Does not <br> display character | Performs same function <br> as RETURN key |
| RS <br> (Record Separator) | CTRL 4 | Returns the cursor <br> to the HOME position |  |
| CR/LF | CTRL RUBOUT | - | Moves cursor to the left <br> margin and down one line |

## MAGNETIC TAPE

File Creation and Maintenance

| FIND | FINO | Rewinds the internal magnetic tape. |
| :---: | :---: | :---: |
|  | FIN 5 | Finds file 5 and opens the file for access. |
|  | FIN@10:7 | Sends a find file 7 command to device 10 on the GPIB. |
| MARK | MAR 2,5000 | Creates two new files on the internal magnetic tape starting at the present position of the tape head. 5000 bytes of storage is reserved for each file. |
|  | MAR@10:1,SPA | Creates one new file on external tape unit number 10. Enough space is reserved to save the current BASIC program. |
| KILL | KIL 5 | Kills file 5 on the internal magnetic tape. |
|  | KIL@10:7 | Sends a kill file 7 command to device 10 on the GPIB. |
| TLIST | TLI | Lists the internal magnetic tape directory on the GS display. |
|  | TLI@12: | Sends a copy of the internal magnetic tape directory to device 12 on the GPIB. |
| TYP | TYP(0) | Returns the next data item type in the current internal magnetic tape file. <br> $0=$ Empty file or file not open. <br> $1=$ End of File. <br> $2=$ ASCII data. <br> 3 = Binary numeric data. <br> 4 = Binary character string. |
| CLOSE | CLO | Closes all internal tape and disk files. |
| BASIC Program Files |  | See SAVE and OLD |
| ASCII Data Files |  | See INPUT and PRINT |
| Binary Data Files |  | See READ and WRITE |

Tektronix, Inc.
Information Display Group
P.O. Box 500

## INPUT

## BASIC Programs

| OLD | OLD | Loads a BASIC program into memory from the internal magnetic tape. |
| :---: | :---: | :---: |
|  | OLD@10: | Loads a BASIC program into memory from device 10 on the GPIB. |
|  | OLD @40: | Loads a BASIC program into memory from the data communications interface. |
| APPEND | APP 500 | Adds program lines from the current internal tape file to the program currently in memory. The first line coming in overwrites the target statement 500. The renumber increment is 10 by default. |
|  | APP @10:500,5 | Adds the program lines from the current file in device 10 to the program currently in memory. The first line coming in overwrites the target statement 500. The renumber increment is 5 . |
| ASCII Data |  |  |
| INPUT | INP M, R,W\$ | Inputs two numbers and a character string from the GS keyboard. |
|  | INP@33:M,C,D\$ | Inputs two numbers and a character string from the current internal magnetic tape ASCII data file. |
|  | INP@10:J,R,K\$ | Inputs two numbers and a character string from device number 10 on the GPIB. |
|  | INP@40:G,R | Inputs two numbers from the data communications interface. |
| Binary Data |  |  |
| READ | REA J,D,G\$ | Assigns two numbers and a character string to the variables J, D, and G\$ from the DATA statement. |
|  | REA @33: B\$,E\$ | Reads two character strings from the current magnetic tape binary file. |
|  | REA@10:S,B | Reads two numbers from device 10 on the GPIB. |

## Byte Transfer over the GPIB

```
RBYTE RBYJ,M
```

Receives the decimal equivalent of two data bytes over the GPIB and assigns the data bytes to J and M .

## OUTPUT

## BASIC Programs

SECRET
SAVE
ASCII Data

| PRINT PRI "Jack",G; | Sends the character string <br> "Jack" and the value as- <br> signed to G to the GS dis- |
| :--- | :--- |
| play. The comma specifies |  |
| a TAB. The semicolon |  |
| suppresses the carriage |  |
| return. |  |

PRI@10: USI 250:M5 The numeric data assigned to M5 is sent to device 10 on the GPIB using the format specified in line 250, an IMAGE statement.

IMAGE IMA5X,FD.3D,2A Specifies a print format to be used in a PRINT USING statement.

## Binary Data

WRITE WRI 56,"DATA",7 Sends the data items 56, "DATA", and 7 to the internal magnetic tape in binary format.

WRI@10:A\$
Sends the character string assigned to A\$ to device 10 on the GPIB in binary format.
Byte Transfer over the GPIB
WBYTE WBY@42:65,-66
Issues the primary listen address for device 10 (decimal 42) over the GPIB with ATN activated. The binary byte decimal 65 is issued next, followed by decimal 66 with EOI activated.

WBY \%68,37: Issues the primary talk address for device 4 (decimal 68) and the primary listen address for device 5 (decimal 37) over the GPIB with ATN activated. The \% sign tells the controller to get off the bus.

## GRAPHICS

## Graphics Environmental Parameters

| VIEWPORT | VIE 0,50,0,100 | Sets the GS display drawing boundaries as follows: $\begin{aligned} & X \text {-min. }=0 \text { GDU's } \\ & X-\text {-max. }=50 \text { GDU's } \\ & \text { Y-min. }=0 \text { GDU's } \\ & Y \text {-max. }=100 \text { GDU's } \end{aligned}$ |
| :---: | :---: | :---: |
| WINDOW | WIN 0,10,0,50 | Sets the window boundaries as follows: <br> $X$-min. $=0$ UDU's <br> $X$-max. $=10$ UDU's <br> Y -min. $=0$ UDU's <br> $Y$-max. $=50$ UDU's |
| SCALE | SCA 1,2 | Sets the horizontal scale factor to 1 and the vertical scale factor to 2. |
|  |  | $\text { Scale Factor }=\frac{\text { UDU's }}{\text { GDU's }}$ |
| "ALPHASCALE' | PRI@16,17: X , Y | Sends alphanumeric scale information to device 16 on the GPIB. The horizontal scale factor $X$ is sent first, followed by the vertical scale factor $Y$. |
| Rotate | ROT 45 | Sets the GS display rotation angle to 45 (radians, degrees, or grads). |
| "ALPHAROT" | PRI @16,25:45 | Sets the alpharotation parameter on device 16 to 45 degrees. |

## Graphics Input

| INPUT | INPUT@16:X,Y | Inputs the graphic page size from device 16 on the GPIB. The horizontal dimension is assigned to $X$; the vertical dimension is assigned to Y . |
| :---: | :---: | :---: |
| GIN | GIN X,Y | Records the position of the graphic point on the GS display in UDU's. The horizontal coordinate is assigned to $X$. The vertical coordinate is assigned to $Y$. |
|  | GIN@16: X, Y | Records the position of the graphic point on device 16. The horizontal coordinate is assigned to $X$; the vertical coordinate is assigned to Y . |

## GRAPHICS (Cont)

## Graphics Input (cont)

| POINTER POI X,Y,Z\$ | Displays the graphic cursor <br> on the GS display and records <br> the coordinates of the graphic |
| :--- | :--- |
|  | point when a key is pressed. |
| The horizontal coordinate in |  |
|  | UDU's is assinged to $X ;$ the |
| vertical coordinate in UDU's |  |
| is assigned to Y; the key |  |
| symbol is assigned to $Z \$$. |  |

## Graphics Output

NOTE: All coordinates are specified in user data units.

| MOVE | MOV $X, Y$ | Moves the graphic point to the absolute coordinates $X, Y$. |
| :---: | :---: | :---: |
|  | MOV @16:X,Y | Moves the graphic point on device 16 to the absolute coordinates $\mathrm{X}, \mathrm{Y}$. |
| RMOVE | RMO $X, Y$ | Moves the graphic point on the GS display to a position $X$ units horizontally and $Y$ units vertically from its present position. |
|  | RMO @16: $\times$, Y | Moves the graphic point on device 16 to a position $X$ units horizontally and $Y$ units vertically from its present position. |
| DRAW | DRA $X, Y$ | Draws a line from the present position of the graphic point to the coordinates $\mathrm{X}, \mathrm{Y}$. |
|  | DRA @16: $\mathrm{X}, \mathrm{Y}$ | Draws a line from the present position of the graphic point on device 16 to the coordinates $\mathrm{X}, \mathrm{Y}$. |
| RDRAW | RDR $X, Y$ | Draws a line to a position which is $X$ units horizontally and $Y$ units vertically from the present position of the graphic point on the GS display. |
|  | RDR@16: $\mathrm{X}, \mathrm{Y}$ | Draws a line to a position which is $X$ units horizontally and $Y$ units vertically from the present position of the graphic point on device 16. |
| AXIS | AXI 10,0,65,50 | Creates an $X-Y$ axis on the GS display with the following characteristics: <br> $X$ tic interval $=10$ <br> $Y$ tic interval $=0$ <br> $X$ axis intercept $=65$ <br> Y axis intercept $=50$ |

## STRING FUNCTIONS

| LEN | LEN A\$ | Returns the number of characters currently assigned to A\$. |
| :---: | :---: | :---: |
| POS | $Y=P O S(A \$, B \$, X)$ | The string assigned to $A \$$ is searched starting at character position $X$. The first character position occurance of the sub string $\mathrm{B} \$$ is assigned to Y . |
| SEG | $C \$=S E G(A \$, 6,10)$ | A 10 character segment of $A \$$ is assigned $C \$$. The segment starts at position 6. |
| REP | $A \$=R E P(B \$, 6,10)$ | Part of $A \$$ is replaced by $B \$$. Starting at position 6, 10 characters are deleted before $\mathrm{B} \$$ is inserted. |
| VAL | VAL "1234" | The character string "1234" is converted to the number 1234. |
| STR | $A \$=S T R 1234$ | The number 1234 is converted to the string " 1234" and assigned to $\mathbf{A} \$$. |
| ASC | ASC " ${ }^{\prime \prime}$ " | Returns the number 65, the decimal equivalent of " $A$ ". |
| CHR | A $\$=\mathrm{CHR}(66)$ | Converts decimal 66 to its ASCII character equivalent $(B)$ and assigns " $B$ " to A\$. |

CHARACTER PRIORITY
