FOR RELEASE: JULY 9, 1984

The 4692 Color Graphics Copier, scheduled for an October 1984 release by Tektronix, incorporates a unique Ink Transient Suppressor designed to increase copier reliability and decrease maintenance demands. Other features include automatic handling of A- and A4-size cut sheet paper and transparencies, on-board support for 216 colors and a modular design for easy maintenance and service. The 4692 is priced at \$5,995; an optional four-channel multiplexer is \$895.

The Tektronix 4510 Color Graphics Rasterizer is a stand-alone hardware rasterizer designed for use with Tektronix 4692 and 4691 Color Graphics Copiers. Scheduled for October 1984 release, the 4510 converts high-level graphic commands into copier-compatible raster data without making additional demands on system software. When connected through the 4510 interface, the 4692 and 4691 can become shared system resources for entire networks. Available in three memory configurations, prices are: \$4,495 for the 128K byte version, (option 30); \$5,995 for the 512K byte version, (option 31); and \$9,995 for the 2M byte version, (option 32).
