## SECTION I IDENTIFICATION AND DESCRIPTION

1. Test Instrument Identification. This bulletin provides instructions for the calibration of Oscilloscope AN/USM-488 and Tektronix, Type 2235. The manufacturers' manuals were used as the prime data sources in compiling these instructions. The equipment being calibrated will be referred to as the TI (test instrument) throughout this bulletin.
a. Model Variations. Variations among models are listed in text.
b. Time and Technique. The time required for this calibration is approximately 2 hours, using the dc and low frequency technique.

## 2. Forms, Records, and Reports

a. Forms, records, and reports required for calibration personnel at all levels are prescribed by TB 750-25.
b. Adjustments to be reported are designated $(R)$ at the end of the sentence in which they appear. When adjustments are in tables, the (R) follows the designated adjustment. Report only those adjustments made and designated with (R).
3. Calibration Description. TI parameters and performance specifications which pertain to this calibration are listed in table 1.
