475A Portable Oscilloscope

The 475 A is an improved performance version of the 475 Portable Oscilloscope. It provides 250 MHz at $5 \mathrm{mV} / \mathrm{div}$ and a reduced spot size.

It is intended to be marketed in a performance dollar gap that is currently being exploited by the HP1720A. The 250 MHz 475 A , priced at $\$ 3300$, and the 200 MHz 475 , priced at $\$ 3000$, will be extremely competitive with the 200 MHz HP 1710 B at $\$ 2900$ and the $275 \mathrm{MHz} \mathrm{HP1720A}$ at $\$ 3750$. With the DM44, the 475A will have a considerable price performance advantage over the HP1722A. The 475A DM44 will have essentially the same features as the HP1722A and will cost $\$ 3710$ versus $\$ 4900$ for the HP1722A.

## TRIGGERING A and B

A Trigger Modes-Normal (sweep runs when triggered), Automatic (sweep free-runs in the absence of a triggering signal and for signals below 30 Hz ). Single Sweep (sweep runs one time on the first triggering event after the reset selector is pressed.)
$B$ Trigger Modes- $B$ runs after Delay Time (starts automatically at the end of the delay time) and $B$ triggerable after Delay Time (runs when triggered). The $B$ (delayed) sweep runs once, in each of these modes, following the $A$ sweep delay time.
