COMPANY CONFIDENTIAL

THE CONTENTS OF THIS CATALOG ARE FOR THE EXCLUSIVE USE OF TEKTRONIX EMPLOYEES. ANY UNAUTHORIZED USE MAY CONSTITUTE A THEFT.

PURPOSE AND USE

This catalog is not intended to be a specification document by including all characteristics of the parts listed. It is a catalog with parts arranged in an order determined by the prime characteristic.

Parts not listed herein are either not to be used in new design or are so new that their characteristics may yet be changed. We suggest you call the appropriate Component Engineer and/or check the component specification for complete details on any part before making a decision on its use. Specifications can be obtained from Reprographics 58-038, ext. 1658, or viewed at any of the satellite aperture card locations.

CORRECTIONS & SUGGESTIONS

Corrections or suggestions are encouraged at any time. Call ext. 2585 or mail to delivery station 78-567. Special forms for this purpose are also included at the front of the catalog.

UPDATES AND NOTES

We have included pages throughout the catalog entitled UPDATES AND NOTES for your use.

HOW TO ORDER CATALOGS

Call ext. 2591 or write to Parts Cataloging, 78-567. We will need your name, payroll code, delivery station and responsibility-cost center.

USING CATALOGS FOR PARTS REPLACEMENT

No effort has been made to correlate the parts in this catalog with those parts which are available for replacement in the field. Some of the parts listed herein are not available for use as replacement parts. Ordering such parts will only slow your order and impede the general efficiency of the parts ordering process. All replacement parts are listed in the NPR (Numerical Parts Record).

NOTICE: The Insulators & Heat Sinks Section has been removed from this catalog and will appear in the Semiconductor (#1) only.

CATALOG DISTRIBUTION NOT AUTOMATIC

We have special routing lists to announce new catalogs. A response to those notices is necessary each time to receive the next edition of a catalog. Call ext. 2591 to have your name added to the mailing list.

PARTS INFORMATION (WHERE TO LOCATE - HOW TO DO)

- BILL OF MATERIALS - Component Item Sequence Report (#400-02) - 55-139 or ext. 3584.
- BUYER for a part is ? - See inside back cover or call ext. 2727.
- BUYER NUMBER:
 1. For a given part number - Use IMS - IMINQRT2.
 2. General reference - See inside back cover or call ext. 2727.
- CENTRAL STORES PARTS - 71-555 or call ext. 4182.
- COMPONENT ENGINEER for a part is ? - See pages 0-70 through 0-73.
- COMPONENT INFORMATION SYSTEM (CIS) - Available on CYBER B Machine.
 1. On-line queries and data entry of purchased component information.
 2. Printed reports of purchased component information.
 3. Call CISDG at Ext's. 2520, 2583 or 2587 for more information.
- COMPONENT RELIABILITY INFORMATION SERVICES - 53-114, ext. 8006-MR.
- COMPONENT NEWS (publication) - Call ext. 1762 or write to 58-122 for copies.
- COMPONENT RELIABILITY - Call ext. 1605, 58-061.
- COST:
 1. Of a part - Ext. 3246, 55-640.
 2. Of an instrument - Ext. 3246, 55-640.
 3. How a cost was arrived at - Ext. 3246, 55-640.
- DESCRIPTION OF A PART (in Item Master) - Call ext. 2220.
- ENVIRONMENTAL TEST LAB (I.D.) - Call ext. 4788, 50-132.
- ENVIRONMENTAL TEST LAB (I.D.D.) - Call ext. 3987-W, 63-076.
- NETTING REPORT (requirements) - Call ext. 3268.
- NPR (Numerical Parts Record) - Parts Research, ext. 2156, 73-848.
- PARTS RESEARCH (Customer Service) - 73-848, ext. 2156.
- PPL (Parts Price List) - Parts Research, ext. 1951, 73-275.
- PPRL (Parts Price & Replacement List) - Parts Research, ext. 1951, 73-275.
- PRODUCT FAILURE EXPERIENCE - Call ext. 8006-MR, 53-114.
- RESERVES on a part - Call ext. 3268.
- SALVAGE: (Further questions call ext. 8346-Y6 or 8345-Y6)
 1. Paper and old catalogs - Send to 02-172.
 2. Chemicals with precious metals - 10-000.
 3. Precious metals bearing scrap - 68-000.
(There is a precious metals transfer form available - #000-8855-00)
- SOURCES on a purchased part:
 1. PISL (purch. item source list) - Attached to each part specification.
 2. PISL on-line on the Component Information System on CYBER B Machine (see CIS above). Users manual for CIS is available from 78-584.
 3. Buyer - See inside back cover or call ext. 2741.
- SPECIFICATION DOCUMENT for a part:
 1. Aperture card file and viewer-printer:
 - a. Reprographics, 58-038, ext. 1658 (generally same day service, 24 hours)
 - b. Buildings 19, 39, 50, 63, 78 and 92.
 2. Aperture card file and viewer only:
 - a. Buildings 02, 19, 51, 53, 55, 58, 60, 70, 73 and 94.
- STATUS of a part - IMS - IMINQRT2
- To order A NEW PURCHASED PART:
 1. For trial use: Special purchase requisition (form #000-1165-00).
 2. For permanent use: PPIF (form #000-1704-00) to 78-584.
- To order PARTS FROM STOCK - Refer to Materials Ordering & Planning Process Manual.
- To order PRINTED FORMS - Use Requisition Review Log Sheets, form #000-5930-00 and send it to 70-697, ext. 4166.
- To order TEK INSTRUMENT MANUALS:
 1. From the field - Use TEKNET.
 2. Internal - Use Requisition Review Log Sheet #000-5930-00 and process it like a part order.
(NOTE: Manuals cannot be ordered by instrument number, call ext. 2208 to get manual numbers.)
- To order TEK PRODUCT CATALOGS - 76-131 or ext. 2248.
- To order THESE CATALOGS - Ext. 2591, 78-567. We will need your name, payroll code, delivery station, ext. and responsibility-cost center before issuing a catalog.
- To order UNNUMBERED PARTS SAMPLES - Special purch. req. to engineering buyer.
- UNNUMBERED PARTS & WHO HAS THEM - Check with eng. buyer or comp. eval. engineer.
- VENDOR COMPONENT CATALOGS - 78-567, ext. 2591.
- WHERE A PART IS USED (instrument or kit):
 1. Call ext. 2200 or stop by 78-608.
 2. Use bill of materials (component item sequence portion).
 3. First used on - Call ext. 2220.

SEND OUTDATED CATALOGS TO SALVAGE, 02-001.

PURCHASED PART INITIATION FORM

The PPIF is shown below. The form was revised to add spaces for safety requirements, and space to list second source.

Please salvage the old forms and order new ones from the warehouse (P/N 000-1704-00).

ORIGINATOR - Fill as completely as possible. Attach two copies of manufacturer's data sheet or 2 Tek drawings. In the event of a mod, a copy of the mod proposal. Send all six copies of the PPIF and attachments to Documentation Coordination, 78-584.

C.E. - Documentation Coordinator (ext. 2586 & 2578) will assign parts coordination number for tracking. C.E. Engineer will complete this section.

BASE DATA MGT. DEPT. - Assigns Tek part number and description.

FIRST PARTS DISTRIBUTION - Used to reserve stock for mod. If a new part in new instrument, Engineering Stock parts may be set up.

PURCHASING - Completed at time of initial purchase order.

WHAT IS THE COMPONENT INFORMATION SYSTEM?

The Component Information System, CIS, is a computerized database system which acts as a centralized source of information on purchased components. CIS contains the following types of services: on-line data entry by the originators of the data, on-line queries by any CYBER B computer user using a user-friendly interactive program, and standard and customized reports on lists of parts supplied by the user. The database currently contains information on 59,000 purchased and 7,000 Tek-manufactured components. Most of the information contained in the system is related to "fitness for use". CIS now contains information on purchased part descriptions, buyers, costs, controlling documents, official sources for parts, Component Engineering and Reliability Engineering comments on purchased parts, Product Safety generated information about safety-controlled parts, and parametric information (only for memories at this time). By the end of year 200 CIS will contain information on purchased part documentation (currently existing in Dorothy Smith's Documentation Coordination System).

Call Jim Sasser (ext. 2587) to schedule a 45 minute presentation on CIS or to schedule a training session on use of the on-line program.

EIA DATE CODE

EIA DATE CODE

What and why:

The production lot date of many, if not most of our purchased electrical parts are identified by using the EIA date code system. In other words, the EIA date code is used to identify the date of production for a part.

How does the date code work?

The last two digits of the production year plus the number of the week of that year are used. A hypothetical example of the use of the EIA date code would be: two digits for the year - such as "82" and another two digits for the week of the year. Thus, the date code might be: 8206 which would represent "82" for 1982, the production year, and "06" for the week of February 4-10, the production week. (The first week of the year is that calendar week in which the first Thursday falls.)

If a component manufacturer is unable to use the four-digit date code, an alternate three-digit code may be used by taking only the last digit of the year. The above example would then become: 206.

UL INFORMATION

1

DEFINITION OF UL TERMS USED IN TEXT OF SECTION 1

HOT WIRE IGNITION -- THE NUMBER OF SECONDS NEEDED TO IGNITE STANDARD SPECIMENS WHICH ARE WRAPPED WITH RESISTANCE WIRE THAT DISSIPATES A SPECIFIED LEVEL OF ELECTRICAL ENERGY.

HIGH-AMPERE ARC IGNITION -- THE NUMBER OF ARC RUPTURE EXPOSURES WHICH ARE NECESSARY TO IGNITE A MATERIAL WHEN THEY ARE APPLIED AT A STANDARD RATE (EITHER ON THE SURFACE OF THE MATERIAL OR A SPECIFIED DISTANCE FROM IT).

HIGH-VOLTAGE ARC TRACKING RATE -- THE RATE (IN/MIN) THAT A TRACKING PATH CAN BE PRODUCED ON THE SURFACE OF THE MATERIAL UNDER STANDARDIZED CONDITIONS.

FLAMMABILITY -- MATERIALS ARE CLASSIFIED, BASED ON BURNING TESTS CONDUCTED IN ACCORDANCE WITH UL 94:

THE CLASSIFICATIONS ARE 94HB, 94V-2, 94V-1, OR 94V-0.

UL RECOGNIZED COMPONENT PLASTICS SHOULD BE USED IN NEW DESIGN AND REDESIGN WHENEVER POSSIBLE. WHEN CHOOSING A PLASTIC BE SURE THAT IT IS PROPERLY RATED FOR YOUR APPLICATION ACCORDING TO THE STANDARD APPROPRIATE FOR YOUR PRODUCT. FOR INFORMATION ON THE USE OF UL RECOGNIZED COMPONENT PLASTICS, CALL BERT HIPPE, PLASTICS, EXT. 7296 VANCOUVER, OR PRODUCT SAFETY, WALLY HOUSE, EXT. 7374.

CONDUCTIVE ELASTOMER SELECTION GUIDE

Many plastic compounds can be made electrically conductive by blending them with electrically conductive fillers such as graphite, metal powders, or carbon black. Pyrolyzed organic fibers derived from nylon, polyacrylonitrile, and pitch are combined with either thermosetting or thermoplastic compounds to impart conductivity. A loading of 0.5 percent in polyester sheet molding compounds, the pyrolyzed pitch will yield surface resistivities on the range of 30 to 50 ohms/sq.

Another approach to providing conductivity in non-conductive plastics is metallized fiberglass. The glass fibers have a deposited coating of nickel. The metal/fibers impart conductivity along with the strengthening of the plastic molding compound.

Epoxy conductive compounds often contain pure silver and are available as pastes in bulk or in collapsible tubes and as one component film forming systems. The room temperature curing pastes are useful in making connections where heat cannot be tolerated. It is also possible to use gold, palladium, platinum, and lower cost metals.

BULK

<u>MATERIAL DESCRIPTION</u>	<u>PROPERTIES/FEATURES</u>	<u>USAGE/AVAILABILITY</u>
(1) CARBON-SILICONE ELASTOMER	Silicone rubber with uniformly dispersed non-metallic conductive particles. Semi-conductive, resistivity is 7 to 10 ohm-cm (or up to 10^5 ohm-cm), depending on customer specifications.	Material comes in various extruded shapes and molded parts—strips, sheets, tubings, stamped parts, etc. Usage includes belts, rolls, gaskets, tubings, others.
(2) CARBON-POLYESTER	Volume-conductive material has an electrical conductance of 50,000 ohms (maximum). Humidity independent, it has high abrasion resistance, low affinity for water and good resistance to most acids and alkalis.	Available as a bulk material in films, sheets, blocks, rods, tubings. Used to make molds, or fabricated into special shapes.
(3) SILVER SILICONE & SILVER FLUOROSILICONE ELASTOMERS	Silicone or fluorosilicone binder with a filler of either pure silver or silver plated copper particles (pure silver particles are required for application with temperatures continuously above 125°C). Silver combined with silicone gives an unusually high RF attenuation with remarkable moisture and pressure seal. When application involves contact with hydraulic fluids, ozone, oils and chemical solvents, silver fluorosilicone is recommended. Resistivity range for various related grades is 0.003 to 0.018 ohm-cm.	Uses: Gaskets, seals, sensing devices, static charge components, etc. Available in many shapes and stamped parts. Also custom cut to specifications. Sheets and strips with or without pressure-sensitive adhesive backing.
(4) ALUMINUM WITH NEOPRENE OR SILICONE	Elastomer is of woven aluminum wire cloth impregnated with neoprene or silicone fluid sealing material.	Available in thin sheets from which intricate shapes can be cut.
(5) NICKEL-SILICONE ELASTOMER	Silicone rubber with a uniform dispersion of randomly oriented nickel fibers. Operating temperature: -54° to 232°C. Volume resistivity = 0.45 ohm-cm. It has an exceptional sealing property, corrosion resistance and is compatible with most metals and alloys.	Available in sheets, die-cut or stamped parts and shapes -- in black or metallic gray colors. Uses: Gaskets, contacting elements, conductive belts, static-charge components, and others.
(6) MONEL OR ALUMINUM WITH SILICONE	Similar to (3) and (4) in materials, but this elastomer is formed by critically expanding a fine metal foil and impregnating the expanded sheet with Silicone to seal.	For EMI/EMP gasketing grounding, bonding, and static discharge. Available in standard sheet sizes or larger in thin thicknesses.
(7) CONDUCTIVE FELT METAL WITH SILICONE	Elastomer is a sintered fiber metal felt produced in sheet form. Metal used is stainless steel (may also be phosphorous bronze or mild steel). Neoprene or butyl rubber may also be used for fillers. Material is recommended for low flange temperature range.	Used as conductive gaskets, ground vibration isolators, static dissipators, etc.

PARTICLE-FILLED PRODUCTS

<u>MATERIAL DESCRIPTION</u>	<u>PROPERTIES/FEATURES</u>	<u>USAGE/AVAILABILITY</u>
(1) CONNECTOR BUTTONS/FRAMES	Conductive button connector can be molded in frames or rail or used individually. The resilient buttons are carbon or silver-filled silicone and this is molded in a dielectric carrier which may be glass-filled nylon or polyimide film.	Buttons are connectors for LDC's to PCB's, test and burn-in fixtures, etc. Molded in strips, connector buttons are used for interconnecting PCB's, flat cables, grounding devices, shock mounts, etc.
(2) SWITCH CONTACTS	Material is of silicone rubber filled with carbon or silver particles. Carbon-filled contacts have a resistance of <300 ohms-cm while the silver-filled ones give <0.30 ohms-cm resistance.	Material comes molded or extruded and sliced to any length. Standard sizes and shapes available but can be ordered to meet specifications.
(3) SEAL/SHIELD STRIPS	Commonly used are closed cell sponge, solid neoprene or silicone. Metals employed are Monel and Sn/Cu/Fe. Aluminum and silver plated brass are occasionally used.	Standard strips are available in 25-foot rolls but specific lengths with square and miter cut ends can be ordered. Thickness must be specified when ordering.
(4) TAPES/CLOSURES	Aluminum metal foil and metal-filled acrylate (with silicone release coated paper liner) transfer tapes are available. The conductive closure comes in two parts: One, the silver-impregnated nylon tape is covered with finely woven metal filaments formed into permanent hooks; the other covered with soft loops (pile). When pressed together, the two tapes provide a tight EMI/RFI seam. Either hook or pile may be used alone as a conductive resilient gasket.	Uses include: Closure tapes for mating joints, hinge covers, gaskets and in printers, copiers and computers
(5) CONDUCTIVE FOAM	Low density types: Antistatic Kincel, Aircap, Astro-Suprabubble and Pink Poly Foam. (Normal Density is 1 lb./ft ³ .) Meets ASTM D-257-66 STDS for surface resistivity. Hard density types: Carbon impregnated polyurethane or molded expanded polystyrene. (Normal density is up to 2.5 lb./ft ³ .) Meets MIL-P-26514.	Available in custom shaped, flat, die-cut or standard sheets. Light-density foams are available in rolls. Low-density foams are used for cushioning and packaging voltage sensitive devices or made into bags and pouches. High-density types are used for safe transport of MOS integrated circuits and other pinned devices.

SURFACE-COATED MATERIALS

<u>MATERIAL DESCRIPTION</u>	<u>PROPERTIES/FEATURES</u>	<u>USAGE/AVAILABILITY</u>
(1) CONDUCTIVE FILMS	<p>A popular type is Pink Poly. Conductivity is brought about by a hygroscopic type of filler incorporated into a polyethylene matrix.</p> <p>Another type which comes opaque or transparent is a laminated polyester-polyethylene material with coating of nickel fibers on the film's surface.</p>	Available thicknesses are 3 to 6 mils. Used for wrappings, liners, table top covers, anti-static bags, etc.
(2) OPTICAL WINDOWS	<p>Optical panel materials commonly used are glass, acrylic, polycarbonate and fluoro-carbon plastics. The conductive transparent coating (may be graphite) is incorporated into the substrate's surface.</p> <p>Other materials available are Abcite, Mylar and Homalite.</p> <p>Note: The preipheries of these windows are terminated with a border of highly conductive, pure silver coated material. Use of conductive gasket is ideal for EMI/RFI shielding effectiveness.</p>	Windows are for optical displays and shielding. Polarized filter laminates are available as well as those with frosted and/or transparent finishes. Grids calibration rulings, characters and markings can be custom ordered.

CONDUCTIVE COMPOUNDS

<u>MATERIAL DESCRIPTION</u>	<u>PROPERTIES/FEATURES</u>	<u>USAGE/AVAILABILITY</u>
(1) ADHESIVE SEALANTS/EPOXIES	<p>Pure silver-loaded RTV liquid silicone rubber adhesive-sealant has a volume resistivity of 0.01 ohms-cm. It is fast drying and forms a firm, flexible resilient bond. (Some RTV adhesives use nickel carbon, aluminum, bronze, sponge iron and even gold fillers.) For high-temperature resistance with stronger and longer aging bond than the rubber adhesives (can be formulated to withstand UV rays, too) the acrylate and polyurethane adhesives are good to use.</p>	<p>Used for bonding, joining and repairing parts and joints, conductive seam sealant, etc.</p> <p>Some come as a two-compartment epoxy or as a regular one-compartment adhesive sealant in a dispenser tube.</p>
(2) CONDUCTIVE GREASE	<p>Usually silver silicone grease with no carbon or graphite fillers. Operating temperatures: -54° to 232°C, inert to ozone, radiation and most chemical compounds, and have excellent resistance to moisture and humidity.</p>	<p>Used to reduce friction resistance and noise. It can be applied by wiping or brushing.</p>
(3) CEMENT CAULKING SYSTEMS	<p>Copper and carbon free, it is usually made of a conductive plastic-polypropylene, polyurethane, and polyvinylacetate, or silicone in silver resin.</p>	<p>Caulking systems come with putty-like consistency and are readily applied with a caulking gun, spatula or syringe.</p> <p>Cements are similar to caulking systems except that they come in thicker paste form.</p> <p>Applications: Used in ferrite and pot cores, repair of PCB's, gaskets and shields, cables, tubings, others.</p>

CONDUCTIVE TEXTILES

<u>MATERIAL DESCRIPTION</u>	<u>PROPERTIES/FEATURES</u>	<u>USAGE/AVAILABILITY</u>
(1) CONDUCTIVE TEXTILES	<p>Different types of materials are available: One is of a highly conductive silver metallized knit or woven nylon fabric. Laminated kinds are also available for special applications. Included in this type of fabric is a 0.50 mil pressure-sensitive polyester fiber which comes with a 0.001 mil clean nylon; a black conductive polyethylene; a pink antistatic nylon fabric; and a blend of 65 percent polyester, 34 percent cotton and 1 percent stainless steel fiber.</p> <p>For performance when exposed to environmental conditions, vinyl coated fabrics are also available.</p> <p>Note: These fabrics have a surface resistance of <10 ohms-cm; have a tensile strength of up to 125 psi, tear strength of 3.5 to 8 psi and withstand temperatures of -40° to 120°C.</p>	<p>The silver-metallized nylon comes in standard widths and thickness, and in white or silver gray colors only. Other types come in different solid colors. These materials are laundered the same as ordinary clothing.</p> <p>Uses: Aprons, lab coats, protective suits for high-voltage linement, shielding curtains, body contacts and electromedical sensors, etc.</p>

MATERIAL NAMES:

The standard used at Tek for naming parts is H6 (Cataloging Handbook). In some cases, the ASTM uses different names than H6. In such cases the H6 name will be used.

ALUMINUM CORNER EXTRUSION

255-0630-XX

255-0714-XX

255-0717-XX

NOTE: See Pages 6-37 & 6-38 for Aluminum Extrusions.

255-0630-XX - This standard corner trim strip is used for most applications.

DESCRIPTION	COLOR	PART NUMBER	CC
Corner	Tek Blue	255-0630-00	F-
Corner	TV Gray	255-0630-01	F-
Corner	Tek Tan	255-0630-02	E+
Corner	Earth Brown	255-0630-03	E+

255-0631-XX - This extrusion's function is to lock two modules together, either side by side or top and bottom. It is slid onto the corner rails of two modules from the rear. No disassembly is needed.

DESCRIPTION	COLOR	PART NUMBER	CC
Interlock	Tek Blue	255-0631-00	F+

Interlock	Tek Tan	255-0631-02	F+
Interlock	Earth Brown	255-0631-03	C-

255-0656-XX - This is a filler strip used on aluminum extrusion 251-1513-00 to conceal screwheads and give a finished appearance to the assembly.

Interlock	Earth Brown	255-0656-03	E+

255-0714-XX - This extrusion was designed to give customers the option of mounting their instruments to a surface (bench top, underside of shelf, etc.) by either the top, bottom, or side rails.

255-0717-XX - When the handle is on a side cover rather than the top cover, this extrusion can be used for the corner trim strips on the rails opposite the handle cover rails. The raised portion acts as a foot, protecting the aluminum corner rails from being scratched.

255-0733-00 - This extrusion is designed to serve as a protective strip, placed on the aluminum corner rails during instrument assembly, to keep them from being scratched or otherwise damaged.

If notched to clear the front casting, it will also protect the front castings finish.

THE STATUS IN THIS CATALOG WAS CORRECT AT THE TIME IT WAS PUBLISHED, BUT IT IS SUBJECT TO CHANGE.

§ TO USE A PART WITH THIS STATUS ON A NEW INSTRUMENT REQUIRES THAT A NEW PURCHASED PART INITIATION FORM (PPIF) BE INITIATED.

(A GLOSSARY OF TERMS FOR THESE STATUS CODES CAN BE FOUND ON PAGE 0-10).

MATERIAL NAMES:

The standard used at Tek for naming parts is H6 (Cataloging Handbook). In some cases, the ASTM uses different names than H6. In such cases the H6 name will be used.

ADDITIONAL SUBSTRATES CAN BE PRODUCED WITHOUT TOOLING CHANGES UNDER THE FOLLOWING CONDITIONS:

1. USE SAME MATERIAL FAMILY AS LISTED IN STANDARD BASE MATERIAL TABLE BELOW.
- * 2. DO NOT EXCEED MAXIMUM THICKNESS LISTED.
3. LENGTH AND WIDTH REMAIN SAME AS EXISTING PART NUMBER.
4. NEW PART NUMBERS NEED TO BE ASSIGNED.
5. OPTIONS PERTAIN ONLY TO TEK-MADE PARTS.

ALUMINUM EXTRUSION

FINISHES

FINISHES: THE FOLLOWING CHART LISTS THE TEK STANDARD "F" FINISHES WITH THE APPROPRIATE INDUSTRY TERMINOLOGY, AND THEIR APPROPRIATE END APPLICATION IN TERMS OF TEK GRADE FINISHES.

<u>TEK STANDARD</u>	<u>DESCRIPTION</u>	<u>INDUSTRY STANDARD</u>	<u>END APPLICATION</u>
F-0	NO SIGNIFICANT CHANGE	MILL FINISH	TEK GRADE IV, III
F-1	EXPOSED SURFACES APPEARANCE IS NOT IMPORTANT, 135 MICROFINISH (150 RMS)	EXPOSED SURFACE	TEK GRADE III, II
F-2	SURFACE APPEARANCE IS IMPORTANT, 90 MICROFINISH (100 RMS)	SPECIAL #1	TEK GRADE II
F-3	SURFACE APPEARANCE IS CRITICAL, 55 MICROFINISH (60 RMS)	SPECIAL #2	TEK GRADE I

AN F-0 EXTRUSION WILL NORMALLY MEET GRADE IV NEEDS AND REQUIRE SOME SECONDARY FINISHING TO MEET GRADE III REQUIREMENTS, AND F-1 WILL USUALLY BE SATISFACTORY FOR GRADE III, BUT REQUIRE SECONDARY FINISHING TO MEET GRADE II. F-3 FINISHES CAN ONLY BE USED BY SPECIAL AGREEMENT WITH THE SUPPLIER, AND ARE PRIMARILY FOR SECTIONS THAT CANNOT BE READILY FINISHED WITH SECONDARY OPERATIONS, AND THAT HAVE A GRADE I COSMETIC REQUIREMENT.

TOLERANCES: OBVIOUSLY, SOME TOLERANCES NEED TO BE CLOSER THAN INDUSTRY STANDARDS. IT IS TRUE THAT SOME DIMENSIONS CAN BE HELD CLOSER, PARTICULARLY THROUGH SOLID METAL: HOWEVER, THIS AFFECTS DIE LIFE DUE TO THE NORMAL EROSION WEAR THAT TAKES PLACE IN AN EXTRUSION DIE. CLOSER TOLERANCES BETWEEN WEBS ARE DIFFICULT BECAUSE OF THE SHRINKAGE AND STRESS RELIEF CHARACTERISTICS OF ALUMINUM EXTRUSIONS, SO THESE SHOULD BE HANDLED BY SECONDARY OPERATIONS OR ALTERNATE DESIGN METHODS. A THOROUGH ACQUAINTANCE WITH TABLE 2 ON PAGE 13 OF THE TEK STANDARD WILL BE MOST HELPFUL IN MEETING THE DESIGN ENGINEER'S REQUIREMENTS, WHILE BEING CONSISTENT WITH THE PROCESS RESTRICTIONS OF THE EXTRUSION INDUSTRY.

STRESS RELIEF DISTORTIONS: BECAUSE OF THE NATURE OF THE EXTRUSION PROCESS, ALUMINUM EXTRUSIONS HAVE MANY CONTAINED INTERNAL STRESSES. WHENEVER THEY ARE CUT OR MACHINED, THEY MAY DISTORT TO AN OUT-OF-TOLERANCE CONDITION, DEPENDING UPON THE CUT AND THE CONFIGURATION OF THE PART BEING MADE. CHANNEL OR ANGLE CONFIGURATIONS ARE PARTICULARLY SUSCEPTIBLE TO THIS, AND WILL BE SIGNIFICANTLY DISTORTED BY JUST CUTTING TO LENGTH. CONSULTATION WITH PRODUCTION ENGINEERING IS RECOMMENDED IN THE EARLY DESIGN STAGE TO ALLOW FOR APPROPRIATE FINISHING MATERIAL IN EXTRUSION DESIGNS WHERE DISTORTION MAY BE CRITICAL.

VENDOR'S DRAWING: THE VENDOR'S EXTRUSION PROCESS REQUIRES THAT HE DESIGN A DIE THAT WILL ALLOW FOR SHRINKAGE, DIE WEAR, AND THE STRESS RELIEF CHARACTERISTICS OF EXTRUDED ALUMINUM WHEN CUT. THIS DIE IS ESSENTIALLY A FEMALE OF THE DESIRED EXTRUSION, WITH THESE ALLOWANCES DESIGNED IN. BECAUSE OF THESE REQUIREMENTS, THE VENDOR'S DRAWING IS SELDOM AN EXACT DUPLICATE OF THE TEK DESIGNER'S DRAWING. RATHER, IT IS A DRAWING OF WHAT THE VENDOR BELIEVES HE CAN DO TO MEET THE DESIGNER'S NEEDS, AND YET ALLOW FOR THE PROCESS VARIABLES. CHARACTERISTICALLY, THIS DRAWING WILL BE TOLERANCED ACCORDING TO THE APPROPRIATE TABLES IN THE TEK STANDARD, WHICH ARE IDENTICAL TO THE ALUMINUM ASSOCIATION TABLES.

TEK DRAWINGS, TEK STANDARD: THE NEW STANDARD FOR EXTRUSIONS, 062-1713-00, INCORPORATES IN ITS ENTIRETY THE ALUMINUM ASSOCIATION STANDARDS, WITH NOTES ON THEIR USE. THIS REPLACES ALL EARLIER STANDARDS, AND SHOULD BE CAREFULLY USED IN THE DESIGN OF NEW EXTRUSIONS TO AVOID PROBLEMS WITH FINISHES AND TOLERANCES (ANGULAR AS WELL AS LINEAR).

IN THE EVENT OF QUESTIONS ON ANY OF THE AREAS DISCUSSED ABOVE, PRODUCTION ENGINEERING WILL BE GLAD TO WORK WITH EXTRUSION SUPPLIERS AND DESIGN ENGINEERING TO MEET OUR INSTRUMENT NEEDS.

- ① These Standard Tolerances are applicable to the average shape; wider tolerances may be required for some shapes and closer tolerances may be possible for others.
- ② The tolerances applicable to a dimension composed of two or more component dimensions is the sum of the tolerances of the component dimensions if all of the component dimensions are indicated.
- ③ When a dimension tolerance is specified other than as an equal bilateral tolerance, the value of the Standard Tolerance is that which would apply to the mean of the maximum and minimum dimensions permissible under the tolerance.
- ④ Where dimensions specified are outside and inside, rather than wall thickness itself, the allowable deviation (eccentricity) given in Column 3 applies to mean wall thickness. (Mean wall thickness is the average of two wall thickness measurements taken at opposite sides of the void).
- ⑤ In the case of Class 1 Hollow Shapes the standard wall thickness tolerance for extruded round tube is applicable. (A Class 1 Hollow Shape is one whose void is round and one inch or more in diameter and whose weight is equally distributed on opposite side of two or more equally spaced axes.)
- ⑥ At points less than 0.250 inch from base of leg the tolerances in Column 2 are applicable.
- ⑦ Tolerances for extruded shapes in T3510, T4510, T6510, T73510, T76510 and T8510 tempers shall be agreed upon between purchaser and vendor at the time the contract or order is entered.

ALUMINUM EXTRUSION (CONT)

TABLE NO. 10.1 (CONT)

- ⑧ The following tolerances apply where the space is completely enclosed (hollow shapes):
For the width (A) the tolerance is the value shown in Column 4 for the depth (D).

For the depth (D) the tolerance is the value shown in Column 4 for the width (A).

In no case is the tolerance for either width or depth less than at the corners (Column 2, metal dimensions).

Example - Alloy 6061 hollow shape having 1 x 3 inch rectangular outside dimensions: width tolerance is ± 0.021 inch and depth tolerance ± 0.034 inch. (Tolerances at corners, Column 2, metal dimensions, are ± 0.024 inch for the width and ± 0.012 inch for the depth.) Note that the Column 4 tolerance of 0.021 inch must be adjusted to 0.024 inch so that it is not less than the Column 2 tolerance.

- ⑨ These tolerances do not apply to space dimensions such as dimensions "X" and "Z" of the example (right) even when "Y" is 75 percent or more of "X". For the tolerance applicable to dimensions "X" and "Z", use Column 4, 5, 6, 7, 8 or 9, dependent on distance "A".

- ⑩ The wall thickness tolerance for hollow or semihollow shapes shall be as agreed upon between purchaser and vendor at the time the contract or order is entered when the nominal thickness of one wall is three times or greater than that of the opposite wall. (Examples at right)

CLOSED-SPACE DIMENSIONS EXAMPLES

All dimensions designated "Y" are classed as "metal dimensions" and tolerances are determined from column 2.
Dimensions designated "X" are classed as "space dimensions through an enclosed void" and the tolerances applicable are determined from Column 4 unless 75 percent or more of the dimension is metal, in which case Column 2 applies.

OPEN-SPACE DIMENSIONS

Tolerances applicable to dimensions "X" are determined as follows:

1. Locate dimension "X" in Column 1.
2. Determine which of Columns 4-9 is applicable, dependent on distance "A".
3. Locate proper tolerance in Column 4, 5, 6, 7, 8 or 9 in the same line as dimension "X".

Dimensions "Y" are "metal dimensions"; tolerances are determined from Column 2. Distances "C" are shown merely to indicate incorrect values for determining which of Columns 4-9 apply.

Tolerances applicable to dimensions "X" are determined as follows:

1. Locate distance "B" in Column 1.
2. Determine which of Columns 4-9 is applicable, dependent on distance "A".
3. Locate proper tolerance in Column 4, 5, 6, 7, 8 or 9 in same line as value chosen in Column 1.

Tolerances applicable to dimensions "X" are not determined from Table 10.1; tolerances are determined by standard tolerances applicable to angles "A".

Footnotes for Pages 20-21

① These Standard Tolerances are applicable to the average shape; wider tolerances may be required for some shapes and closer tolerances may be possible for others.

② TX510 and TX511 are general designations for the following stress-relieved tempers: T3510, T4510, T6510, T8510, T73510, T76510 and T3511, T4511, T6511, T8511, T73511, T76511, respectively.

③ When weight of piece on flat surface minimizes deviation.

④ The circumscribing circle diameter is the diameter of the smallest circle that will completely enclose the cross-section of the extruded product.

⑤ Tolerances for 0, T3510, T4510, T6510, T73510, T76510 and T8510 tempers shall be as agreed upon between purchaser and vendor at the time the contract or order is entered.

⑥ Twist is normally measured by placing the extruded section on a flat surface and measuring the maximum distance at any point along its length between the bottom surface of the section and the flat surface. From this measurement, the deviation from true straightness of the section is subtracted. The remainder is the twist. To convert the standard twist tolerance (degrees) to an equivalent linear value, the tangent of the standard tolerance is multiplied by the width of the surface of the section that is on the flat surface. The following values are used to convert angular tolerance to linear deviation.

Tolerance, Degrees	Max. Allowable Linear Deviation in. Per in. of Width

maximum subtended angle of 90 degrees. Extruded curved surfaces comprising more than a 90-degree subtended angle are checked by sliding the gauge across the surface, thus checking two or more 90-degree portions of the surface. Extruded shape surfaces comprised of arcs formed by two or more radii require the use of a separate contour gauge for each portion of the surface formed by an individual radius.

^④Tolerances for 0, T3510, T4510, T6510, T73510, T76510 and T8510 tempers shall be as agreed upon between purchaser and vendor at the time the contract or order is entered.

^⑤Angles are measured with protractors or with gauges. As illustrated, a four-point contact system is used, two contact points being as close to the angle vertex as practical, and the others near the ends of the respective surfaces forming the angle. Between these points of measurement surface flatness is the controlling tolerance.

^⑥When the space between the surfaces forming an angle is all metal, values in column 2 apply if the larger surface length to metal thickness ratio is 1 or less.

^⑦When two legs are involved the one having the larger ratio determines the applicable column.

MATERIAL NAMES:

The standard used at Tek for naming parts is H6 (Cataloging Handbook). In some cases, the ASTM uses different names than H6. In such cases the H6 name will be used.

① For TX51 tempers, tolerance is applicable only to thicknesses of 0.500 in. and over.

② TX51 is a general designation for the following stress-relieved tempers: T351, T451, T651, T851 and T7351.

③ When weight of piece on flat surface minimizes deviation.

① When outside diameter, inside diameter, and wall thickness (or their equivalent dimensions in other-than-round tube) are all specified, standard tolerances are applicable to any two of these dimensions, but not to all three. When both outside and inside diameters are specified, tolerances applicable to the O.D. dimension shall apply to both O.D. and I.D.

② When a dimension tolerance is specified other than as an equal bilateral tolerance, the value of the standard tolerance is that which would apply to the mean of the maximum and minimum dimensions permissible under the tolerance.

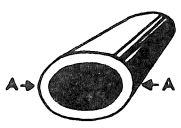

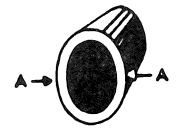

③ Mean diameter is the average of two diameter measurements taken at right angles to each other at any point along the length.

④ Not applicable to annealed (O temper) tube, coiled tube, or tube having a wall thickness less than 2½ percent of the specified outside diameter. The tolerance for tube with wall thicknesses less than 2½ percent of the specified outside diameter is determined by multiplying the applicable tolerance in columns 3 and 4 as follows:
 2% to 2½% excl. — 1.5 × tolerance
 1½% to 2% excl. — 2.0 × tolerance
 1% to 1½% excl. — 3.0 × tolerance

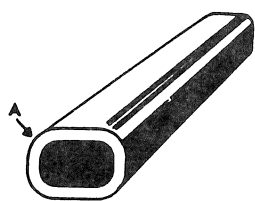

⑤ For the T8 tempers of 6063 the tolerances in Column 3 apply.

⑥ Example: The width tolerance of 1x3 inch rectangular tube is plus and minus 0.008 inch and the depth tolerance is plus and minus 0.012 inch.

① When outside diameter, inside diameter, and wall thickness (or their equivalent dimensions in other-than-round tube) are all specified, standard tolerances are applicable to any two of these dimensions, but not to all three.

② When a dimension tolerance is specified other than as an equal bilateral tolerance, the value of the standard tolerance is that which would apply to the mean of the maximum and minimum dimensions permissible under the tolerance.

③ The mean wall thickness of round tube is the average of two measurements taken opposite each other. The mean wall thickness of other-than-

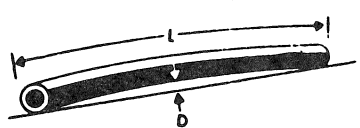

round tube is the average of two measurements taken opposite each other at approximate center line of tube and perpendicular to the longitudinal axis of the cross section.

④ When dimensions specified are outside and inside, rather than wall thickness itself, allowable deviation at any point (eccentricity) is plus and minus 10 percent of the mean wall thickness but not less than ± 0.003 inch.

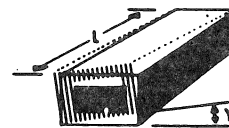

⑤ Equivalent round diameter is the diameter of the circle having a circumference equal to the perimeter of the tube.

FOOTNOTES FOR PAGES 7-18 THRU 7-21.

① When outside diameter, inside diameter, and wall thickness (or their equivalent dimensions in other-than-round tube) are all specified, standard tolerances are applicable to any two of these dimensions, but not to all three. When both outside and inside diameters are specified, tolerances applicable to the O.D. dimension shall apply to both O.D. and I.D.

② When a dimension tolerance is specified other than as an equal bilateral tolerance, the value of the standard tolerance is that which would apply to the mean of the maximum and minimum dimensions permissible under the tolerance.

③ Mean diameter is the average of two diameter measurements taken at right angles to each other at any point along the length.

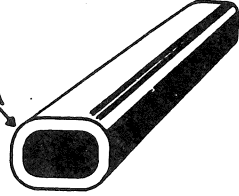

④ Not applicable in the annealed (O) temper or if wall thickness is less than 2½ percent of the outside diameter or equivalent round diameter. The equivalent round diameter is the diameter of a circle having a circumference equal to the perimeter of the tube.

⑤ The mean wall thickness of round tube is the average of two measurements taken opposite each other. The mean wall thickness of other-than-round tube is the average of two measurements taken opposite each other at approximate center line of tube and perpendicular to the longitudinal axis of the cross section.

⑥ When dimensions specified are outside and inside, rather than wall thickness itself, allowable deviation at any point (eccentricity) applies to mean wall thickness.

12.13 ● DENTS EXTRUDED TUBE^⑮

Depth of dents shall not exceed twice the applicable ovality tolerance (Table 12.1) for the particular tube size being measured, except for tube having a wall thickness less than 2½ percent of the Outside Diameter in which case the following multipliers apply:

2% to 2½% exclusive — 2.5 x tolerance (max.)
1½% to 2% exclusive — 3.0 x tolerance (max.)
1% to 1½% exclusive — 4.0 x tolerance (max.)

⑦ Tolerances for T3510, T4510, T6510, T73510, T76510 and T8510 tempers shall be as agreed upon between purchaser and vendor at the time the contract or order is entered.

⑧ TX510 and TX511 are general designations for the following stress-relieved tempers: T3510, T4510, T6510, T8510, T73510, T76510, and T3511, T4511, T6511, T8511, T73511, T76511 respectively.

⑨ When weight of piece on flat surface minimizes deviation.

⑩ The circumscribing circle diameter is the diameter of the smallest circle that will completely enclose the cross section of the extruded product.

⑪ Twist is normally measured by placing the extruded section on a flat surface and measuring the maximum distance at any point along its length between the bottom surface of the section and the flat surface. From this measurement, the deviation from true straightness of the section is subtracted. The remainder is the twist. To convert the standard twist tolerance (degrees) to an equivalent linear value, the tangent of the standard tolerance is multiplied by the width of the surface of the section that is on the flat surface.

⑫ Not applicable to TX510 or TX511 temper tube having a wall thickness less than 0.095 in.

⑬ Defects include die lines, mandrel lines and handling marks.

⑭ Not applicable to tubes over 12.750 O.D.

⑮ Not applicable to annealed (O temper) tube.

1. The radii listed are the minimum recommended for bending sheets and plates without fracturing in a standard press brake with air bend dies. Other types of bending operations may require larger radii or permit smaller radii. The minimum permissible radii will also vary with the design and condition of the tooling.
2. Alclad sheet in the heat-treatable alloys can be bent over slightly smaller radii than the corresponding tempers of the bare alloy.
3. Heat-treatable alloys can be formed over appreciably smaller radii immediately after solution heat treatment.
4. The H112 temper (applicable to non-heat treatable alloys) is supplied in the as-fabricated condition without special property control but usually can be formed over radii applicable to the H14 (or H34) temper or smaller.

① When a dimension tolerance is specified other than as an equal bilateral tolerance, the value of the standard tolerance is that which would apply to the mean of the maximum and minimum dimensions permissible under the tolerance.

② Also applicable to any 240-inch increment of longer sheet or plate.

③ If specified width is other than an exact multiple of 12 in., tolerance

is determined by using the next largest exact multiple. For example, if specified width is 53 in. and specified length is 72 in., the tolerance is 5/64 in. x 5 = 25/64 in. This result is then rounded to 7/16 in. in accordance with footnote (4).

④ Use values for calculating only. Round result upward to nearest 1/16 in.

① Not applicable to cut-to-length sheet, panel flat sheet, coiled sheet, or sheet over 60 in. wide.

② Also applicable to overall length or width of sheet if only one longitudinal and/or transverse buckle or edge wave is present.

③ As measured with sheet or plate resting on flat surface concave side upward, using a straightedge and a feeler gauge, dial gauge or scale.

④ Not applicable to annealed (O temper) or HX8 temper.

⑤ Not applicable to end or corner turnout.

⑥ TX51 is a general designation for the following stress-relieved tempers: T351, T451, T651, T851, T6151, T7351 and T7651.

4.2 • WIDTH AND LATERAL BOW^⑫

Same as for coiled sheet.
See tables 3.6 and 3.7

⑦ For lengths under 6 ft, the tolerance is 1/8 in.

⑧ For widths over 6 ft, these tolerances apply for any 6 ft of total width.

⑨ Short-cycle flatness is the flatness over any 2-ft span in any direction.

⑩ As measured with the plate resting on a flat surface, and by use of a frame with rollers mounted on 2-ft centers and a depth gauge in the center.

⑪ Not applicable to annealed (O temper) plate in any alloy or F temper plate in heat-treatable alloys.

⑫ Tolerances for thicknesses of 0.005-0.0059 inch are the same as those specified for thickness of 0.006 inch.

MATERIAL NAMES:

The standard used at Tek for naming parts is H6 (Cataloging Handbook). In some cases, the ASTM uses different names than H6. In such cases the H6 name will be used.

COPPER-BERYLLIUM, BERYLLIUM-NICKEL ALLOY GUIDE

A guide for the selection and use of beryllium-copper and beryllium-nickel alloys is available from the Metallurgical Lab. These two alloys are among the most widely used at Tek for producing springs, contact switches, retainer clips and other similar components.

The guidelines were written by Kwaku Mensah, and describe the electrical and mechanical properties of the alloys, as well as the advantages and disadvantages associated with each. Selection factors are based on electrical and thermal conductivity, yield strength, corrosion and wear resistance, fatigue and impact strength and other criteria.

To make the best choice of materials, it is important that designers be aware of the unique properties of these alloys. If you would like a copy of the selection guidelines, send your request to the Metallurgical Lab (38-314).

MATERIAL NAMES:

The standard used at Tek for naming parts is H6 (Cataloging Handbook). In some cases, the ASTM uses different names than H6. In such cases the H6 name will be used.

MATERIAL NAMES:

The standard used at Tek for naming parts is H6 (Cataloging Handbook). In some cases, the ASTM uses different names than H6. In such cases the H6 name will be used.

A guide for the selection and use of beryllium-copper and beryllium-nickel alloys is available from the Metallurgical Lab. These two alloys are among the most widely used at Tek for producing springs, contact switches, retainer clips and other similar components.

The guidelines were written by Kwaku Mensah, and describe the electrical and mechanical properties of the alloys, as well as the advantages and disadvantages associated with each. Selection and factors are based on electrical and thermal conductivity, yield strength, corrosion and wear resistance, fatigue and impact strength and other criteria.

To make the best choice of materials, it is important that designers be aware of the unique properties of these alloys. If you would like a copy of the selection guidelines, send your request to the Metallurgical Lab (38-314).

SOLDER INFORMATION

"Solder" refers to soft solder composed primarily of tin and lead. Soft solder is used for the purpose of joining together two or more metals at temperatures below their melting points. For general assembly line hand soldering, a eutectic, rosin core solder (63% tin, 37% lead) is used because it has one sharp melting point of 361°. Other alloys stay plastic for a short time (plastic range) and joints will be damaged if parts are moved during this time. For flow soldering, 63/37 bar solder is used. Solder used in production areas meets the requirements of Federal Specification QQ-S-571.

For further information, refer to "Assembly Workshop Spec. Manual" or call Barbara Buck on extension 1245.

DESOLDERING TOOLS - STATIC CHARGE

TOOL	CHARGE LEVEL RETAINED ON TOOL	
	Immediate charge	Charge after time
Silverstat Soldapullt	0V	0V After five minutes
Deluxe Soldapullt	3kV	300-400V After five minutes
Standard Soldapullt	20kV	10kV After five minutes
Bulb Solder Sucker	10kV	4kV After five minutes
Solder-Wick	*2kV	0V After one minute

*Charge was retained due to solder-wick's plastic reel

Some circuit board components are sensitive to static charge. Also, some desoldering tools create a static charge. In order to identify and preclude potential problems, we have tested the various desoldering tools available for use at Tek.

A circuit board was used, with components removed, to determine static levels. Each device was tested ten times. The desoldering tools were checked for immediate charge retention and for the charge held after five minutes.

Each of the tools except the Silverstat Soldapullt, left a static charge on the circuit board and retained a charge (see chart). The Silverstat Soldapullt, a model with a metallized surface, left no charge and also retained no charge. Therefore, it is the preferred tool. It has been assigned part number 003-0795-00.

For more information on these desoldering tools, contact Herb Zajac, ext. 7887.

STEEL (CONT)

• APPROXIMATE MECHANICAL PROPERTIES FOR VARIOUS TEMPER OF COLD-ROLLED CARBON STRIP

NOTE: These values are given as information only and are not intended as criteria for acceptance or rejection.

TEMPER	TENSILE STRENGTH psi	ELONGATION IN 2 IN. FOR 0.050 IN. THICKNESS OF STRIP %	REMARKS
No. 1 (Hard)	90.000 ± 10.000		A very stiff, cold-rolled strip intended for flat blanking only, and not requiring ability to withstand cold forming.
No. 2 (Half-Hard)	65.000 ± 10.000	10 ± 6	A moderately stiff cold-rolled strip intended for limited bending.
No. 3 (Quarter-Hard)	55.000 ± 10.000	20 ± 7	A medium soft cold-rolled strip intended for limited bending, shallow drawing and stamping.
No. 4 (Skin-Rolled)	48.000 ± 10.000	32 ± 8	A soft ductile cold-rolled strip intended for deep drawing where no surface strain or fluting is permissible.
No. 5 (Dead-Soft)	44.000 ± 6.000	39 ± 6	A soft ductile cold-rolled strip intended for deep drawing where stretcher strains or fluting are permissible. Also for extrusions.

STEEL (CONT)

WEIGHT (OUNCES AND POUNDS PER SQUARE FOOT

Manufacturers' Standard Gage for Steel Sheets: Although the basic weight of steel used in the manufacture of steel plate, bars, and other steel products is 40.8 pounds per square foot per inch of thickness, the Manufacturers' Standard Gage for Steel Sheets is based on a weight of 41.82 pounds per square foot per inch of thickness. This modified figure provides an adjustment for the variation in thickness from the edges to the center of sheets resulting from the rolling process and also for the shearing tolerances which are on the over side. The thicknesses in the table below are based upon this weight of 41.82 pounds and represent standard mill practice. These nominal thicknesses, however, are subject to tolerances or permissible variations as given on page 13-7 for carbon cold-rolled steel.

A STAINLESS STEEL SELECTION GUIDE HAS BEEN PUBLISHED BY KWAKU MENSAH, CORPORATE METALLURGIST. THE GUIDE INCLUDES A DESCRIPTIVE CLASSIFICATION OF STAINLESS STEELS, A GENERALIZED DISCUSSION OF MECHANICAL PROPERTIES OF METALS (DEFINITIONS AND THE SIGNIFICANCE OF TERMINOLOGY), AND THE PRINCIPLES OF CORROSION AS IT APPLIES TO ALL METALS. TO OBTAIN A COPY, CALL EXTENSION 0259 AND ASK FOR THE PAPER ON STAINLESS STEEL.

IN ADDITION, THE PAPER INCLUDES TABLES DEPICTING TYPICAL MECHANICAL AND PHYSICAL PROPERTIES OF SOME OF THE MORE COMMON STAINLESS STEELS. DESIGNERS SHOULD FIND THIS PAPER PARTICULARLY USEFUL.

* Values given are for comparison and are not specified in ASTM.

¹ Material .156 diameter and under in size, the elongation and reduction in area shall be 25% and 40% respectively.

² CARPENTER S43000 F is a chromium iron alloy specially developed for solenoid cores and housings which must operate in corrosive environments. For magnetic properties, contact Engineering Standards or the vendor catalog.

³ CARPENTER Type S30500 is used for severe deep drawing and spinning operations, also used where the finished part must remain nonmagnetic after severe cold working.

NO 1 FINISH - Hot rolled, annealed and pickled.
NO 2 FINISH - Very bright finish
NO 2B FINISH - Full finish (bright cold rolled).
NO 2D FINISH - Cold rolled, dull finish.
NO 4 FINISH - Standard polish; one or both sides

NO 1 EDGE - Rolled edge, either round or square as specified.

NO 3 EDGE - An edge produced by slitting.

NO 5 EDGE - Approximately square edge produced by rolling or filing after slitting.

CONDITION:

The following conditions (tempers) are available when using ASTM specifications:

Condition A (Annealed).
 Condition B (Cold Worked). Applies to wire annealed and cold worked to produce high strength in chromium-nickel types not hardenable by heat treatment.
 Condition H (Hard Temper).

¹When tubes as ordered require wall thicknesses 1/4 in. (19.0 mm) or over, or an inside diameter 60 percent or less of the outside diameter, a wider variation in wall thickness is required. On such sizes a variation in wall thickness of 12.5 percent over or under will be permitted.
For tubes less than 1/2 in. (12.7 mm) in inside diameter which cannot be successfully drawn over a mandrel, the wall thickness may vary ± 15 percent from that specified.

²These tolerances apply to cut lengths up to and including 24 ft. (7.3 m). For lengths over 24 ft. an additional over tolerance of 1/8 in. (3.2 mm) for each 10 ft. (3.0 m) or fraction thereof shall be permissible, up to a maximum tolerance of 1/2 in. (12.7 mm).

PARTS AND PRODUCTS STATUS CODES

The following definitions apply to the status and source codes presently being input into the Data Base:

CR	Current Production	TC	Tequipment Current Production
EN	Engineering	IN	International
PP	Pre-Production	DS	Digital Systems
CS	Customer Service	SC	Sony/Tek Current Production
NP	Non-Production	OT	Obsolescent
DL	Deleted	MP	Modified Part
OB	Obsolete	LR	Last Supply Current
CM	Custom Mod	LS	Last Supply Customer Service
VN	Vendor		

Current Production (CR):

1. A finished product, which has "turned regular" and is currently being produced in Beaverton.
2. A component currently being purchased or produced in Beaverton for use on a current production finished product.

Engineering (EN):

An item used exclusively by Engineering which is not being used on a finished product. The item may be picked up for use in future product.

Pre-Production (PP):

1. A finished product prior to "turn regular".
2. A component used on an instrument not yet in current production, or a component going into a current product via an IRS (mod).

Customer Service (CS):

A replacement item, not used in a current production instrument, supported by Customer Service and either stocked in Customer Service, built or supplied for them on demand.

Non-Production (NP):

An item which is no longer produced or purchased and which has a replacement.

Deleted (DL):

An item that is no longer produced or purchased and which has no replacement.

Obsolete (OB):

1. A component which has matured through the Long Term Product Support Program. The usage has been out of production for 12 years (sometimes less, if accelerated). The item may continue to be supported through Obsolete Parts Notice 126.
2. An instrument which is no longer produced and which has completed the instrument phase-out program.

Custom Mod (CM):

1. An instrument modified to meet customer specifications.
2. A component used exclusively in a custom modified instrument.

Vendor (VN):

A Tek-made or purchased item which requires a vendor operation somewhere in the processing sequence.

Tequipment (TC):

An item purchased or produced by Tequipment for use exclusively in Tequipment production.

International (IN):

An item purchased or produced by Guernsey or Heerenveen for use exclusively in their production.

Digital Systems (DS):

An item purchased or produced and used exclusively by Digital Systems.

Sony/Tek (SC):

An item purchased or produced by Sony/Tek for use exclusively in Sony/Tek production.

Obsolescent (OT):

An instrument no longer produced which is in the process of going through the Corporate Instrument Phase-Out Program. Upon completion of the program, (when the Bill of Materials has been purged), the status will change to OB. This is an interim status used to identify the backlog of products being cleaned up on the new Phase-Out Program. It will not be needed once the backlog has been completed.

Modified Part (MP):

Number picked up for MODS.

Last Supply Current (LR):

No more parts will be purchased after these are gone.

Last Supply Customer (LS):

No more parts will be purchased after these are gone.

APPLICATION NOTE

All manufacturers of cutting pliers offer a choice of cutting edges. They are standard, semi-flush and full flush. The full flush edge will cut closer than semi-flush or standard, but will have much shorter life. Generally speaking, the best cutting edge to use is semi-flush, because it gives a close enough cut for most assembly work, yet has good life.

See below for further description of cutting edges:

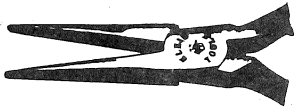

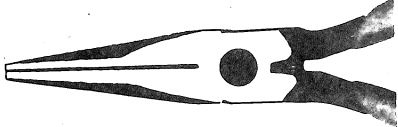

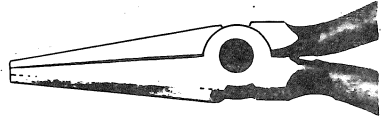

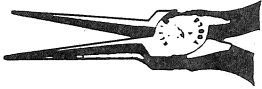

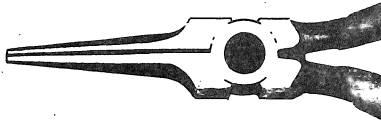

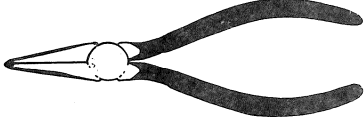

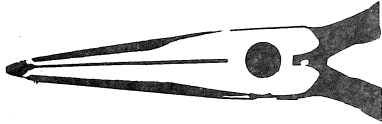

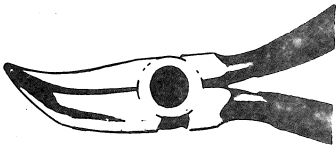

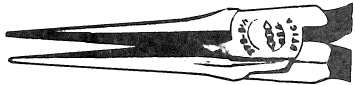

<p>Standard Cutting For cutting hard wire.</p>	
<p>Semi-Flush Cutting For close cutting of medium wire.</p>	
<p>Full-Flush Cutting For close, flat cutting of soft wire only.</p>

APPLICATION NOTE

DRIVER-BIT

Tektronix used fasteners with straight, Phillips, Pozidriv, Torx and hex recesses. Trying to determine which driver-bit type to use is no problem, except for Phillips and Pozidriv. These two recesses look alike, but have one difference that makes bit selection important. The driving flutes of a Pozidriv recess are much wider than those of a Phillips; therefore, a Pozidriv bit will not engage properly into a Phillips recess. If you use a Pozidriv bit in a Phillips recess, the result will be recess burring.

You can, in an emergency, use a Phillips bit in a Pozidriv recess, but extreme care must be exercised since bit engagement will be rather loose.

If you are having a camout and/or recess burring problem, check (a) the type of fastener recess and (b) the type of bit being used. The Pozidriv recess can be identified by a small line between each driving flute (see drawing below). Then choose the proper type (Phillips, Pozidriv, etc.) and size (#0, #1, etc.) of bit. Each bit is marked by type and size, making identification easy. The fastener recess size depends on the fastener size and generally follows the chart shown below. (This chart applies only to Phillips and Pozidriv fasteners. Check fastener specifications for other types of recesses.)

APPLICATION NOTE

SOLDERING IRON TIP

Figure 7, tip design factors that assure maximum flow of heat.

Figure 8, taper can influence heat retention and transfer properties.

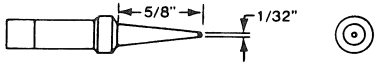

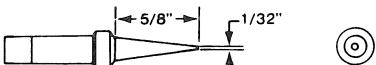

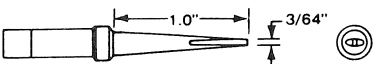

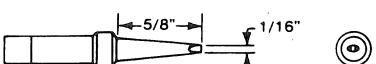

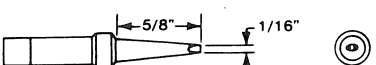

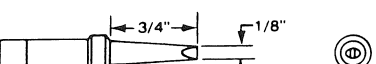

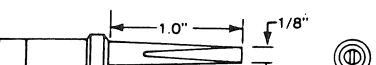

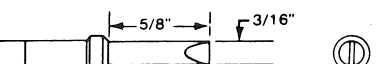

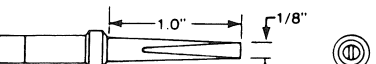

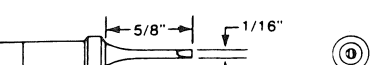

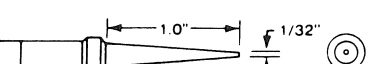

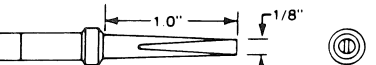

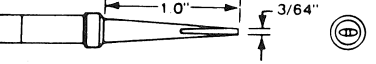

Emphasis always has been placed on the selection of the soldering iron with too little attention paid to the design of the soldering iron tip. There are four tip design factors that should be considered to assure maximum flow of heat, thus permitting the greatest rate of productivity for reliable connections at minimal cost. These are (1) tip length, (2) frontal size (mass), (3) contact area, and (4) tip construction. See Figure 7.

1. **Tip Length** - In order to assure the greatest flow of heat from the element (heater) to the working face of the tip, it is recommended that the tip be as short as possible. On a standard 1/4 inch tip, a rule of thumb is that you decrease tip temperature 100°F per inch of length added to tip.
2. **Frontal Size (Mass)** - Every effort must be made to utilize the largest frontal size possible. Too many engineers, because of some tight spots, standardize on long, turned down tips (Figure 8A), losing the heat retention and transfer properties so important in maintaining constant heat output. Figure 8B shows a tip having the same point face. However since it is a conical taper, it is far more efficient.
3. **Contact Area** - All of the heat from the iron and tip must be transferred to the solder connection through the tip contact area. Therefore, the more interface between tip and solder connection, the shorter the dwell time. Of paramount importance is the fact that the tip must be readily tinnable. It must maintain a solder coat at all times since it is the solder that actually transfers the heat to the connection. The contact area should be selected and designed to suit (match) the soldering task.
4. **Tip Construction** - The tip should be copper base with electro-deposited, high grade iron on the front end (see Figure 8C). The back of the tip should be stainless steel coated. This prevents the tip from ever sticking in the iron. The point face should be tinned with tin/lead solder. The cross hatched area should be immunized with nickel/chrome to prevent solder from creeping toward the soldering iron barrel.

SIX CATALOG INDEX

THIS IS A COMPOSITE INDEX OF THE TYPES OF PARTS INCLUDED IN THE SIX CATALOGS (SHOWN ABOVE). IT IS IN ALPHABETICAL ORDER GIVING THE CATALOG AND SECTION NUMBER THAT THE PARTS ARE LISTED IN.

C A T	S E C T	TYPE OF PARTS (ALPHA LIST)
3	4	Adhesives
4	9	Air Filters
3	5	Aluminum (Extrusion)
3	6	Aluminum (Bar, Wire, Flat, Tube)
2	15	Angle Brackets
1	3	Arrays
1	6	
1	10	Back Diodes
1	10	
4	8	Battery
2	11	Bearing (Sleeve)
2	11	Belts (Drive)
3	8 & 11	Beryllium Materials
2	3	Binding Post
4	10	
2	10	Bracket (Angle & Comp. Mounting)
2	15	
3	7	Brass Material
2	13	Bumpers
2	4	Bushings
2	9	Button Plugs
2	13	Cabinet (Instrument)
2	14	Cabinet (Fasteners)
6	5 & 6	Cables (RF, Special Purpose, Flat)
6	8	Cables (Assys, Power Cords, Ext.)
6	10	Cable Nipples
5	9-14	Capacitors, Fixed
5	15	Capacitors, Variable
1	15	Cartridge Lamp
2	13	Casters
2	14	Catches
3	4	Ceramic Materials
3	3	Ceramic Substrates
2	11	Chains (Drive)
3	4	Chemical Elements & Symbols Table
2	14	Circuit Board Ejectors
4	13	Circuit Board Interconn System
3	3	Circuit Board Laminate Materials
4	6	Circuit Breakers
2	9	Clamps
2	9	Clips
3	15	Coatings (Insulative, Resistive, Paints, etc.)
4	2	Coils
3	1	Conductive Elastomers
4	10-13	Connectors (Ckt Board, Coax, Power, D Series, Peltola, Flat Cable)
4	13	Contacts
3	10-11	Copper and Misc. Copper Alloys
3	8	Copper-Beryllium
4	2	Core (For Coils & Transformers)
2	6	Couplings, Shaft
4	1	Crystal Oscillators
4	1	Crystal Units & Holders
1	11	Current Limiting Diodes
2	13	Cushioning Pads
6	4	Delay Lines
2	7	Dial (Knob & Turns Counting)
1	10-13	Diodes
4	10	Discrete Component Carriers
PG III		EIA Date Code
1	0	Environ and Reliability Notes
3	3	Epoxy Preforms
2	8	Eyelets
4	9	Fan and Impeller (Air)
2	4	Fasteners
3	2	Felt Material
2	3	Ferrules
1	7	FET'S
4	1	Filters (RFI)
2	13	Flipstands, Cab
3	11	Flux
2	13	Foot (Cabinet)
4	2	Form (Coil & Transformer)
1	10	Four Layer Diodes
4	8	Fuses
4	8	Fuseholder and Clips

2	4	Grommets
2	14	Guide (Pin, Ckt Bd & Instr. Cabnt)
2	13	Handles
1	5	Heat Sinks
2	14	Hinges
2	9	Holders
4	8	Holders (Battery)
4	9	Impeller (Air Fan)
1	15	Incandescent Lamps
1	15	Indicator Lights
4	2	Inductors
3	15	Ink (Marking)
2	7	Insert (Knob)
2	2	Insert (Threaded)
2	13	Instrument Cabinets
3	2-4	Insulating Materials (Bulk)
6	9	Insulating Sleeving
2	3	Insulator Post
1	5	Insulators
1	1-4	Integrated Circuits (Microcircuits)
4	13	Interconn System (For Circuit Bds)
4	10	Jack (Telephone & Tip)
2	7	Knob & Knob Subparts
2	6	Knob With Shaft
2	7	Knob Design Data
3	15	Lacquer
1	15	Lamp (Incand, Glow, Indicator)
1	15	Lampholder
2	14	Latch (Door, etc.)
6	1	Leads (Formed)
1	14	LED'S (Light Emitting Diodes)
1	15	Lens (Indicator)
2	14	Lock (Door, etc.)

3	15	Lubricants
4	10	Lug Terminals (Solder and Solderless)
2	4	
3	12	Magnetic Shielding Material
2	12	Marker, Identification
1	1-4	Microcircuits
1	1	Microprocessors
2	13	Modular Packaging System
4	9	Motors
1	15	Neon Lamps
3	11	Nickel Material (Bulk)
2	2	Nuts and Nut Block
1	3	Op Amps
1	14	Optoelectronic Devices
1	14	Optoisolators
2	4	"O" Rings
4	1	Oscillator (Crystal)
2	13	Pad (Cushioning)
3	15	Paint & Paint Additives
3	9	Phosphor-Bronze Material
1	14	Photoconductors
1	14	Phototransistors
2	14	Pin (Guide)
2	8	Pin (Spring and Retaining)
3	1	Plastic Materials (Bulk Molding)
3	2	Plastic (Shapes and Sheets)
2	12	Plate (Indent and Instruction)
2	3	Post (Threaded Spacers)
4	2	Pot Cores
5	6-8	Potentiometer (Variable Resistor)
6	11	Power Supplies
