Instructions

BUFFER TEST KIT

INTRODUCTION

DESCRIPTION

The Buffer Test Kit, which can be ordered from Tektronix, Inc., is intended to aid in the troubleshooting of the Option 05, 06, and/or 10 circuit boards (TV, CTT, and GPIB).

The Buffer Test circuit board and associated parts contained in this kit allow easy access for troubleshooting these Option circuit boards. Instructions and parts are included that allow the Buffer Test circuit board to be used with 2445/2465 or 2445A/2465A/2467 instruments.

This document only supplies information on installing the Buffer Test circuit board and bringing the base instrument back to an operating level with the Option circuit board/s exposed. Refer to the individual Option service manuals for schematics and troubleshooting trees.

Table 1 lists the contents of this kit (Tektronix Part Number 020-1500-00).

Table 1
Buffer Test Kit (020-1500-00)

Item	Qty	Description	Tektronix Part Number
1	1	Buffer Test Board	670-9882-00
2	1	20 Conductor Ribbon Cable	175-4544-00
3	2	2 X 20 Interconnect Pin Set	131-2238-00
4	1	Zero Ohm Jumper	131-0566-00
5	4	Zero Ohm Connector	131-0993-00

PREPARATION FOR USE

As shipped, the Buffer Test circuit board is configured to operate with 2445 and 2465 instruments only. No further modifications to the board itself is necessary.

For use with 2445A, 2465A, or 2467 instruments, the following modification to the Buffer Test circuit board is necessary:

1. Remove R4210 and replace it with the zero ohm jumper (131-0566-00) provided with this kit.
2. Remove R4201 from the circuit board.

CAUTION

The following step requires the use of static prevention techniques to avoid damaging the memory IC (U4260).

For either configuration, it will be necessary to remove the memory IC from the instrument's Buffer board (U4260) and install it in the Buffer Test circuit board. Use static prevention techniques and insure proper pin indexing.

First Printing NOV 1986
Revised MAR 1987

Test Set-Up For 2445/2465 Instruments

1. Install one interconnect pin set (item 3) into each end of the 20 conductor ribbon cable (item 2) to form an Interconnect Cable to be used later.

2. Remove the installed option assembly from the instrument. Note the options installed and all signal connections. As mentioned in the Preparation For Use, transfer the memory IC (U4260) to the Buffer Test circuit board.

3. Install the Buffer Test circuit board into the instrument and re-connect all signal connections that were disconnected while removing the option assembly.

4. Refer to Table 2 for further instructions required to complete the set-up conditions for your particular instrument and option board to be tested. The Options listed under "Option Configuration Installed" refer to the instrument before any options are removed for testing.

5. Remove the problem circuit board from the option assembly and install on the Buffer Test circuit board. Use caution during installation to assure correct pin to connector alignment. Connections for the GPIB port and Word recognizer probe may be made if necessary.

Table 2
2445/2465 Connectors

Board To Be Tested	**Option Configuration Installed**						
	05	06	10	05/06	05/10	06/10	05/06/10
Option 05	a	--	--	b	c	--	e
Option 06	--	a	--	a	--	c	c
Option 10	--	--	a	--	a	d	d

NOTE

P101 and P102 mentioned below are located on the Main circuit board in the standard instrument. Refer to the respective service manual for location of these connectors.

a.	No further connections required.	
b.	Using the zero ohm connectors supplied, connect the following pins together:	
	Pins 1 and 3 of P101	Pins 6 and 8 of P101.
c.	Remove connections from the Front Panel to Buffer board (J651 and J4258) at the Buffer board. Use the interconnect cable to connect the two cables together. When proper connection has been made, the indexing stripes on the ribbon cables (usually red coloring on the grey cables) will align.	
d.	Using the zero ohm connectors supplied, connect the following pins together:	
	Pins 1 and 3 of P101	Pins 3 and 4 of P102 Pins 7 and 8 of P102
e.	Remove connections from the Front Panel to Buffer board (J651 and J4258) at the Buffer board. Use the interconnect cable to connect the two ribbon cables together. When proper connection has been made, the indexing stripes on the ribbon cables (usually red coloring on the grey cables) will align. Using the zero ohm connectors supplied, connect the following pins together:	
	Pins 1 and 3 of P101	Pins 6 and 8 of P101

Test Set-Up For 2445A/2465A/2467 Instruments

1. Remove the installed option assembly from the instrument. Note the options installed. Transfer the memory IC (U4260) to the Buffer circuit test board as mentioned in the Preparation For Use. Verify that the modification described in the Preparation For Use section has been performed.

2. Install the Buffer test circuit board into the instrument and re-connect all signal connections that were disconnected during the option assembly removal process.

3. Refer to Table 3 for further instructions required to complete the set-up conditions for your particular instrument and option board to be tested. The Options listed under "Option Configuration Installed" refer to the instrument before any options are removed for testing.

4. Remove the problem circuit board from the option assembly and install on the Buffer test circuit board. Use caution during installation to assure correct pin to connector alignment. Connections for the GPIB port and Word Recognizer probe may be made if necessary.

Table 3
2445A/2465A/2467 Connectors

Board To Be Tested	**Option Configuration Installed**

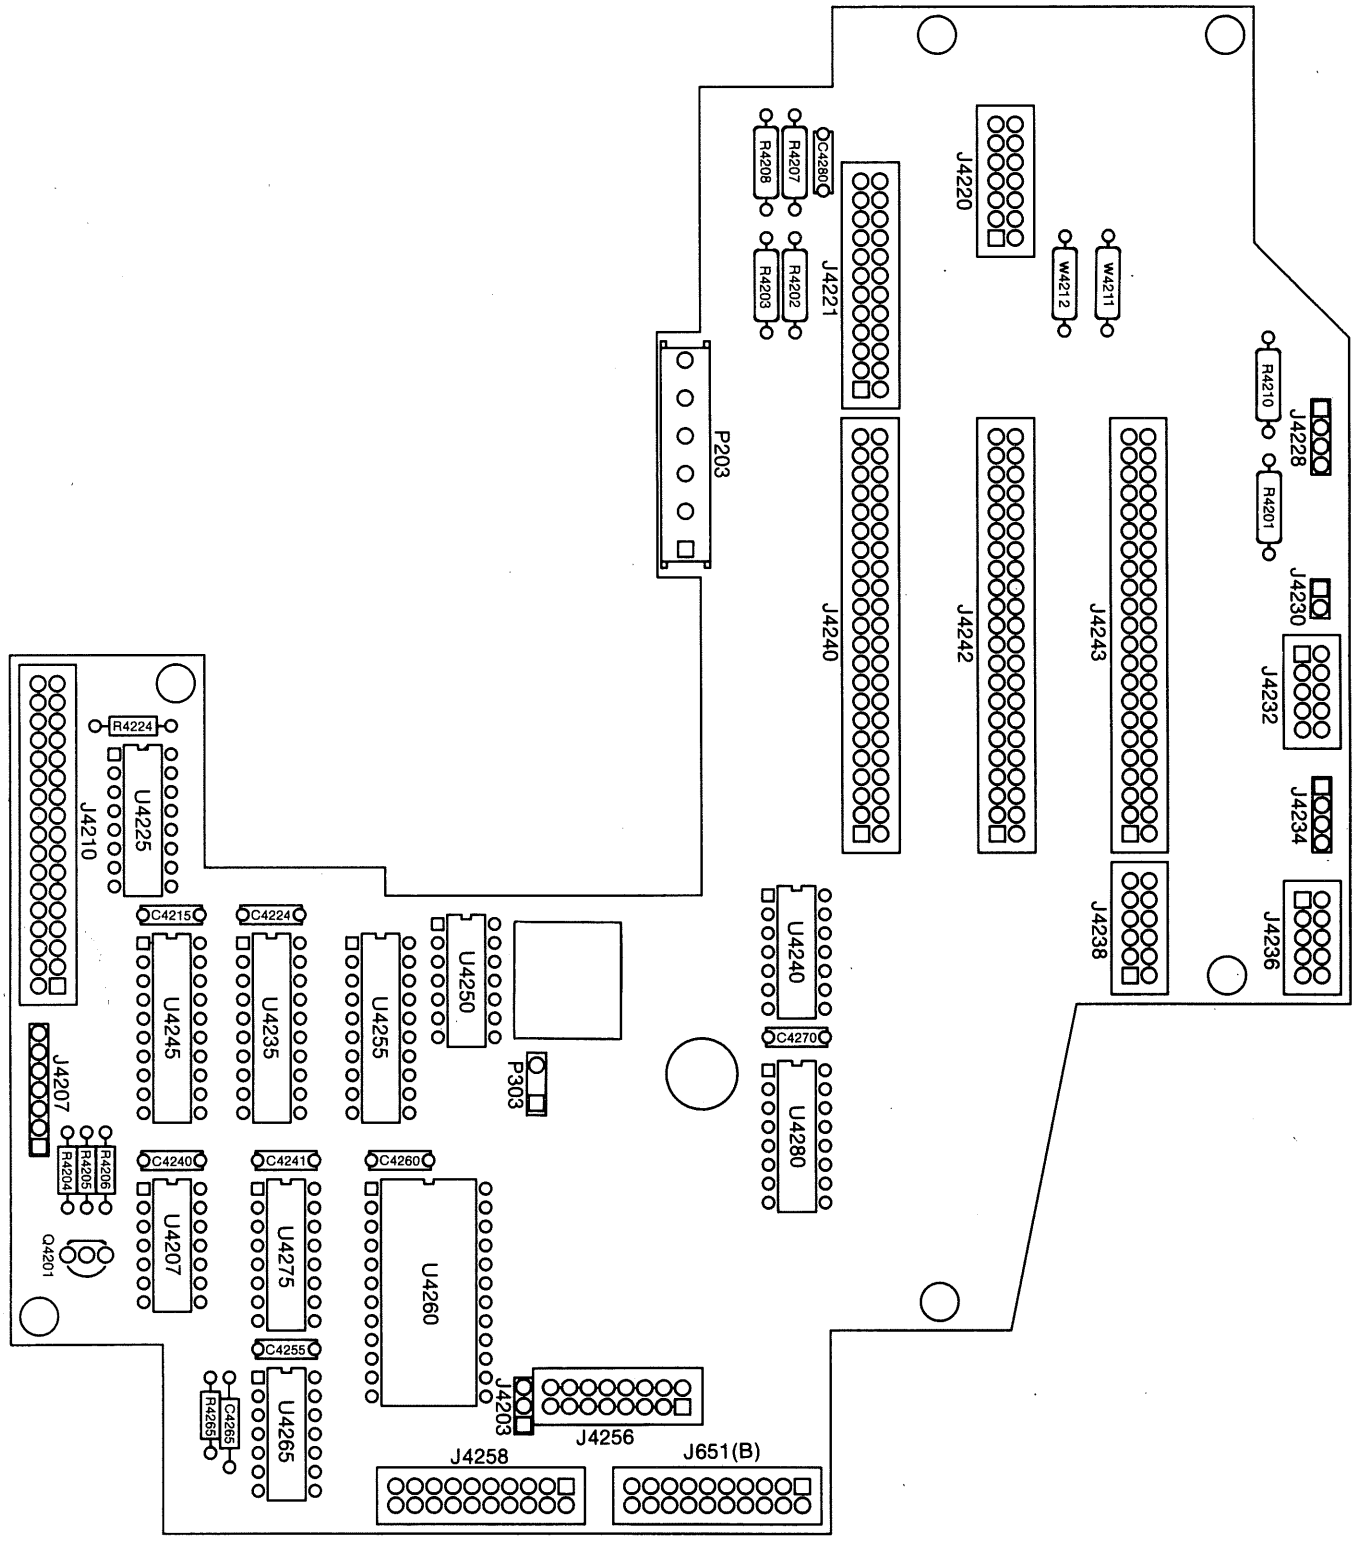
Option 05	a	--	--	b	a	--	b
Option 06	--	a	--	a	--	a	a
Option 10	--	--	a	--	a	c	c

NOTE

P101 and P102 mentioned below are located on the Main circuit board in the standard instrument. Refer to the respective service manual for location of these connectors.

a.	No further connections required.	
b.	Using the zero ohm connectors supplied, connect the following pins together:	
	Pins 1 and 3 of P101	Pins 6 and 8 of P101.
c.	Using the zero ohm connectors supplied, connect the following pins together:	
	Pins 1 and 3 of P101 Pins 6 and 8 of P101	Pins 3 and 4 of P102 Pins 7 and 8 of P102



A20—BUFFER BOARD

REPLACEABLE PARTS

PARTS ORDERING INFORMATION

Replacement parts are available from or through your local Tektronix, Inc. Field Office or representative.

Changes to Tektronix instruments are sometimes made to accommodate improved components as they become available, and to give you the benefit of the latest circuit improvements developed in our engineering department. It is therefore important, when ordering parts, to include the following information in your order: Part number, instrument type or number, serial number, and modification number if applicable.

If a part you have ordered has been replaced with a new or improved part, your local Tektronix, Inc. Field Office or representative will contact you concerning any change in part number.

Change information, if any, is located at the rear of this manual.

LIST OF ASSEMBLIES

A list of assemblies can be found at the beginning of the Electrical Parts List. The assemblies are listed in numerical order. When the complete component number of a part is known, this list will identify the assembly in which the part is located.

CROSS INDEX-MFR. CODE NUMBER TO MANUFACTURER

The Mfr. Code Number to Manufacturer index for the Electrical Parts List is located immediately after this page. The Cross Index provides codes, names and addresses of manufacturers of components listed in the Electrical Parts List.

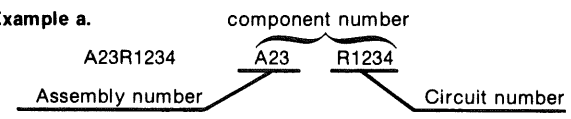
ABBREVIATIONS

Abbreviations conform to American National Standard Y1.1.

COMPONENT NUMBER (column one of the Electrical Parts List)

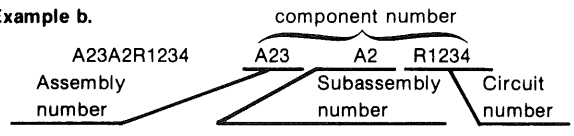
A numbering method has been used to identify assemblies, subassemblies and parts. Examples of this numbering method and typical expansions are illustrated by the following:

Example a.



Read: Resistor 1234 of Assembly 23

Example b.



Read: Resistor 1234 of Subassembly 2 of Assembly 23

Only the circuit number will appear on the diagrams and circuit board illustrations. Each diagram and circuit board illustration is clearly marked with the assembly number. Assembly numbers are also marked on the mechanical exploded views located in the Mechanical Parts List. The component number is obtained by adding the assembly number prefix to the circuit number.

The Electrical Parts List is divided and arranged by assemblies in numerical sequence (e.g., assembly A1 with its subassemblies and parts, precedes assembly A2 with its subassemblies and parts).

Chassis-mounted parts have no assembly number prefix and are located at the end of the Electrical Parts List.

TEKTRONIX PART NO. (column two of the Electrical Parts List)

Indicates part number to be used when ordering replacement part from Tektronix.

SERIAL/MODEL NO. (columns three and four of the Electrical Parts List)

Column three (3) indicates the serial number at which the part was first used. Column four (4) indicates the serial number at which the part was removed. No serial number entered indicates part is good for all serial numbers.

NAME & DESCRIPTION (column five of the Electrical Parts List)

In the Parts List, an Item Name is separated from the description by a colon (:). Because of space limitations, an Item Name may sometimes appear as incomplete. For further Item Name identification, the U.S. Federal Cataloging Handbook H6-1 can be utilized where possible.

MFR. CODE (column six of the Electrical Parts List)

Indicates the code number of the actual manufacturer of the part. (Code to name and address cross reference can be found immediately after this page.)

MFR. PART NUMBER (column seven of the Electrical Parts List)

Indicates actual manufacturers part number.
