ENGINEERING SOLUTIONS ON A CHIP FROM INTERSIL

Product offerings described in this data book reflect Intersil's commitment to industry leadership as a producer of advanced low-power analog and digital semiconductor components and data acquisition systems.

These components are fabricated using a wide variety of process technologies and are intended to provide state-of-the-art performance and maximum cost effectiveness.

Product areas in which Intersil demonstrates its innovative approach to providing engineering solutions on a chip include:

- **FIELD EFFECT AND DUAL MATCHED BIPOLAR TRANSISTORS**

A complete line of high-performance junction FETs, dual JFETs, MOSFETs and matched dual bipolar devices.

- **DIGITAL**

Very low-power CMOS ROMs and EPROMs, as well as high-speed HMOS ROMs; CMOS microprocessors, peripherals and UARTs.

- **ANALOG SWITCHES AND MULTIPLEXERS**

The industry's broadest offering of highest-performance switches, including a video-RF switch with excellent isolation at 100 MHz, and multiplexers featuring the least error as well as unprecedented input overload protection.

- **ANALOG-TO-DIGITAL AND DIGITAL-TO-ANALOG CONVERTERS**

3½- and 4½-digit display output (DVM) analog-to-digital converters; 12-, 14- and 16-bit microprocessor-compatible analog-to-digital converters; and high-speed precision digital-to-analog converters up to 14 bits.

- **LINEAR**

A new set of low-power devices with unequalled performance—1- μ V offset voltage op amps, 4- μ A quiescent current regulators and supply monitors, 95-per-cent-efficient voltage converters and 1ppm/°C voltage references; a complete family of CMOS op amps; and a wide variety of special analog function circuits.

- **TIMERS, COUNTERS AND DISPLAY DRIVERS**

A wide range of low-power counters, timers and multidigit LED, LCD and vacuum fluorescent display decoder/drivers, including those with full alphanumeric capability.

EXPLANATION OF TERMS, INDICES AND SPECIAL SUBSECTIONS

A

PRODUCTION DATA SHEET

This is a full, final data sheet, and describes a mature product in full production. Although Intersil reserves the right to make changes in specifications contained in these data sheets at any time without notice, such changes are not common and are usually minor, generally relating to yield and processing improvements. These data sheets are not marked; others are marked preliminary.

PRELIMINARY DATA SHEET

A preliminary data sheet is issued in advance of the availability of production samples and generally indicates that at the time of printing, the device had not been fully characterized. In the case of a second-source part, the specifications are already determined, and a "preliminary" designation indicates the anticipated availability of the device.

ALPHANUMERIC INDEX

This part number index is arranged first by alpha sequence, (ie: ADCxxxx, DGxxx, Gxxx, ICLxxx, ICMxxxx, etc.) then by numeric sequence (ie: LM100, LM101A, LM102, LM105, etc.) and ignoring package/temperature/pin number suffixes. The basic numbering sequence, is sorted by reading the part number characters from left to right. Reading the left character first (which is usually an alpha character), then the next character to the right and so forth.

BASE NUMBER INDEX

If only the basic part number is known, use the Base Number Index as a locator aid. The Base Number Index is organized in numeric sequence (with alpha prefixes appearing in bold type and numeric characters set in medium type). Devices are arranged in this index according to the numeric value of the first digit on the left, then the value of the second digit, then the third, and so on. For example, device number ICM7218 precedes ICL741, no package/temperature/pin number suffixes are included, but these may be obtained from the specific product data sheet.

FUNCTION INDEX

This is an index of Intersil device types categorized by product grouping and function. The first major subsection, DISCRETES, is further subdivided into categories for JFETs and Special Function devices.

All remaining major subsections (ANALOG SWITCHES/MULTIPLEXERS, DATA ACQUISITION, LINEAR, TIMERS/COUNTERS, TIMEKEEPING/DTMF, MEMORIES and MICROPROCESSORS/PERIPHERALS)

are organized alphabetically by function. The Functional Index appears in its entirety in section A, and an appropriate subindex appears at the beginning of each major product section.

CROSS-REFERENCE GUIDES

Two cross-reference guides are provided: one for Discrete Devices and one for Integrated Circuits.

The Discrete Cross-Reference Guide indicates whether Intersil can provide the industry-standard type, or an Intersil preferred part instead.

The IC Alternate Source Cross-Reference Guide lists competitive manufacturer device types for which Intersil makes pin-for-pin replacements. In the left-hand column, the competitive device part number is organized alphabetically by manufacturer. The Intersil pin-for-pin replacement appears in the right hand column.

SELECTOR GUIDES

Selector guide tables appear at the front of each major product category subsection and provides a quick reference of key parameters for devices contained in that section.

DEVICE FUNCTION/PACKAGE CODES

Package dimensions and diagrams explaining device prefix and suffix codes appear in Appendix B.

DIE SELECTION CRITERIA

Many of Intersil's semiconductor products are available in die form. This subsection of Appendix B contains general information on criteria for transistor and integrated circuit die selection, including physical parameters, packaging for shipment, assembly, testing and purchase options.

HIGH-RELIABILITY PROCESSING

This subsection of Appendix B defines Intersil's commitment to 100 percent compliance with MIL-STD-883, MIL-STD-750, MIL-M-38510 and MIL-S-19500 specifications. It also outlines Intersil's programs for quality conformance, quality testing and limited use qualification and includes a glossary of military/aerospace Hi-Rel terms.

Intersil reserves the right to make changes in circuitry or specifications contained herein at any time without notice.

Intersil assumes no responsibility for the use of any circuits described herein and makes no representations that they are free patent infringement.

LIFE SUPPORT POLICY. INTERSIL'S PRODUCTS ARE NOT AUTHORIZED, NOR WARRANTED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES AND/OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF INTERSIL, INC.

For the purposes of this policy, critical components in life support systems and/or devices are defined as:

1. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
2. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.

Intersil cannot assume responsibility for use of any circuitry described other than circuitry entirely embodied in an Intersil product. No circuit patent licenses are implied. Intersil reserves the right to change the circuitry and specifications without notice at any time.

OBSOLETE PRODUCTS

The products listed below have been designed into circuits in the past, but are no longer likely to be the most economic choice for new designs.

These products are still available for use in existing designs. Data sheets for these products are available upon request.

Specialty Items

ID-100 This product is a diode combination used to protect those P-channel MOSFET duals which are not diode protected. Their chief characteristic is < 1 pA leakage when voltage across them is less than 5 mV. If voltage across diodes is adjusted to 0V \pm 0.1mV, leakage is less than 0.01 pA.

VCR2N

VCR3P

VCR4N

VCR5P

VCR7N

VCR11N (Dual)

The VCR family consists of three terminal variable resistors where the resistance value between two of the terminals is controlled by the voltage potential applied to the third.

Note: Intersil offers the following military qualified devices:*

N-channel switches	N-channel amplifiers	P-channel switches	P-channel amplifiers
2N4091 JAN, JANTX, JANTXV	2N3821 JAN, JANTX, JANTXV	2N5114 JAN, JANTX, JANTXV	2N2609 JAN

2N4093 JAN, JANTX, JANTXV		2N5116 JAN, JANTX, JANTXV	
2N4856 JAN, JANTX, JANTXV			
2N4857 JAN, JANTX, JANTXV			
2N4858 JAN, JANTX, JANTXV			

*JAN processing consists of a sample Group B pulled from the production run.

JANTX processing consists of JAN processing plus 100% electrical read and record, and 100% burn-in.

JANTXV processing consists of JANTX processing plus 100% pre-cap visual and on-shore assembly.

INPUT PULSE
 RISE TIME 0.25 ns
 FALL TIME 0.75 ns
 PULSE WIDTH 200 ns
 PULSE RATE 550 pps

SAMPLING SCOPE
 RISE TIME 0.4 ns
 INPUT RESISTANCE 10 M
 INPUT CAPACITANCE 1.5 pF

FEATURES

- Low $r_{DS(on)}$
- High Y_{fs}/C_{iss} Ratio (High-Frequency Figure-of-Merit)

APPLICATIONS

Used in high-speed commutator and chopper applications. Also ideal for "Virtual Gnd" switching; needs no ext. translator circuit to switch ± 10 VAC. Can be driven direct from T²L or CMOS logic.

2N4351 N-Channel Enhancement Mode MOS FET

FEATURES

- Low ON Resistance
- Low Capacitance
- High Gain
- High Gate Breakdown Voltage
- Low Threshold Voltage

ABSOLUTE MAXIMUM RATINGS

($T_A = 25^\circ\text{C}$ unless otherwise noted)

Drain-Source Voltage or Drain-Gate Voltage	25V
Peak Gate-Source Voltage (Note 1)	$\pm 125\text{V}$
Drain Current	100 mA
Storage Temperature Range	-65°C to $+200^\circ\text{C}$
Operating Temperature Range	-55°C to $+150^\circ\text{C}$
Lead Temperature (Soldering, 10 sec.)	$+300^\circ\text{C}$
Power Dissipation	375 mW
Derate above 25°C	3 mW/ $^\circ\text{C}$

1

*When ordering wafer/dice refer to Appendix B-23.

ELECTRICAL CHARACTERISTICS (25°C unless otherwise noted)

Substrate connected to source.

SMALL SIGNAL CHARACTERISTICS

PARAMETER		TYPICAL VALUE	UNIT	TEST CONDITIONS
h_{ib}	Input Resistance	28	ohms	$I_C = 1mA, V_{CB} = 5V$
h_{rb}	Voltage Feedback Ratio	43	$\times 10^{-3}$	
h_{ie}	Small Signal Current Gain	250		$I_C = 1mA, V_{CE} = 5V$
h_{ob}	Output Conductance	60	$\mu mhos$	
h_{ie}	Input Resistance	9.6	k ohms	
h_{re}	Voltage Feedback Ratio	42	$\times 10^{-3}$	
h_{oe}	Output Conductance	12	$\mu mhos$	

NOTES:

1. Per transistor.
2. The reverse base-emitter voltage must never exceed 7.0 volts and the reverse base-emitter current must never exceed 10 μ amps.
3. The lowest of two h_{FE} readings is taken as h_{FE1} for purposes of this ratio.

1

FEATURES

- Low Insertion Loss
- No Offset or Error Voltages Generated by Closed Switch
- Purely Resistive

APPLICATIONS

- Analog Switches
- Commutators
- Choppers

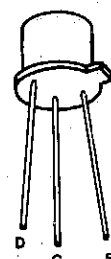

ABSOLUTE MAXIMUM RATINGS

($T_A = 25^\circ\text{C}$ unless otherwise noted)

Gate-Drain or Gate-Source Voltage 30V
 Gate Current 50 mA
 Storage Temperature Range -65°C to $+200^\circ\text{C}$
 Operating Temperature Range -55°C to $+150^\circ\text{C}$
 Lead Temperature (Soldering, 10 sec.) $+300^\circ\text{C}$
 Power Dissipation 500 mW
 Derate above 25°C 3 mW/ $^\circ\text{C}$

NOTE 1: Due to symmetrical geometry these units may be operated with source and drain leads interchanged.

INPUT PULSE
 RISE TIME < 1 ns
 FALL TIME < 1 ns
 PULSE WIDTH 100 ns
 REPLETION RATE 1 MHz

SAMPLING SCOPE
 RISE TIME 0.4 ns
 INPUT RESISTANCE 10 M Ω
 INPUT CAPACITANCE 1.5 pF

1

FEATURES

- Low ON Resistance
- $I_{D(off)} < 500 \text{ pA}$
- Switches directly from T²L Logic

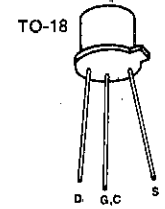

GENERAL DESCRIPTION

Ideal for inverting switching or "Virtual Gnd" switching into inverting input of Op. Amp. No driver is required and $\pm 10 \text{ VAC}$ signals can be handled using only +5V logic (T²L or CMOS).

ABSOLUTE MAXIMUM RATINGS

2N5452-2N5454 Dual Monolithic N-Channel JFET

FEATURES

- Low Offset Voltage
- Low Drift
- Low Capacitance
- Low Output Conductance

GENERAL DESCRIPTION

Matched FET pairs for differential amplifiers. This family of general purpose FETs is characterized for low and medium frequency differential amplifier applications requiring low drift and low offset voltage.

ABSOLUTE MAXIMUM RATINGS

($T_A = 25^\circ\text{C}$ unless otherwise noted)

Gate-Source or Gate Drain

Voltage (Note 1) -50V

Gate Current (Note 1) 50 mA

Storage Temperature Range -65°C to $+200^\circ\text{C}$

Operating Temperature Range -55°C to $+150^\circ\text{C}$

Lead Temperature (Soldering, 10 sec.) $+300^\circ\text{C}$

Power Dissipation 250 mW

Derate above 25°C 2.9 mW/ $^\circ\text{C}$

ONE SIDE BOTH SIDES

500 mW 4.3 mW/ $^\circ\text{C}$

GENERAL DESCRIPTION

This N-Channel Junction FET is characterized for ultra low noise applications requiring tightly controlled and specified noise parameters at 10 Hz and 1000 Hz. Tight matching specifications make this device ideal as the input stage for low frequency differential instrumentation amplifiers.

CMRR	Common Mode Rejection Ratio	90		dB	$V_{DD} = 10$ to $20 \text{ V},$ $I_D = 200 \mu\text{A}$ (Note 3)

- NOTES: 1. These ratings are limiting values above which the serviceability of any individual semiconductor device may be impaired.
 2. Pulse duration of 2 ms used during test.
 3. $\text{CMRR} = 20 \log_{10} \Delta V_{DD} / \Delta |V_{GS1} - V_{GS2}|$, ($\Delta V_{DD} = 10 \text{ V}$)

TYPICAL OPERATING CHARACTERISTICS

1

Diode Protected P-Channel Enhancement Mode MOSFET

FEATURES

- Channel Cut Off with Zero Gate Voltage
- Square-Law Transfer Characteristic Reduces Distortion
- Independent Substrate Connection Provides Flexibility in Biasing
- Internally Connected Diode Protects Gate from Damage due to Overvoltage

HANDLING PRECAUTIONS

MOS field-effect transistors have extremely high input resistance and can be damaged by the accumulation of excess static charge. To avoid possible damage to the device while wiring, testing, or in actual operation, follow the procedures outlined below.

1. To avoid the build-up of static charge, the leads of the devices should remain shorted together with a metal ring except when being tested or used.
2. Avoid unnecessary handling. Pick up devices by the case instead of the leads.
3. Do not insert or remove devices from circuits with the power on as transient voltages may cause permanent damage to the devices.

4. Measured at end points, T_A and T_B .

1

FEATURES

- $I_R = 0.1 \text{ pA}$ (typical)
- $BV_R > 30 \text{ V}$
- $C_{RSS} = 0.75 \text{ pF}$ (typical)

1

GENERAL DESCRIPTION

The ID100 and ID101 are monolithic dual diodes intended for use in applications requiring extremely low leakage currents. Applications include interstage coupling with reverse isolation, signal clipping and clamping and protection of ultra low leakage FET differential dual and operational amplifiers.

ABSOLUTE MAXIMUM RATINGS

TYPICAL CHARACTERISTICS OF ID100/ID101

1

1

FEATURES

- Interfaces Directly w/T²L Logic Elements
- $r_{DS(on)} < 75\Omega$ for 5V Logic Drive
- $I_{D(off)} < 100 \text{ pA}$

GENERAL DESCRIPTION

This P-channel JFET has been designed to directly interface with T²L logic, thus eliminating the need for costly drivers, in analog gate circuitry. Bipolar inputs of $\pm 15 \text{ V}$ can be switched. The FET is OFF for hi level inputs ($+5 \text{ V}$ or $+15 \text{ V}$) and ON for low level inputs ($< 0.5 \text{ V}$ for IT100; $< 1.5 \text{ V}$ for IT101).

ABSOLUTE MAXIMUM RATINGS

($T_A = 25^\circ \text{C}$ unless otherwise noted)

Gate-Source Voltage	35V
Gate-Drain Voltage	35V
Gate Current	50mA
Storage Temperature Range	-65°C to $+200^\circ \text{C}$
Operating Temperature Range	-55°C to $+150^\circ \text{C}$
Lead Temperature (Soldering, 10 sec.)	$+300^\circ \text{C}$
Power Dissipation	300 mW
Derate above 25°C	1.7 mW/ $^\circ \text{C}$

*When ordering wafer/dice refer to Appendix B-23.

A050 Using the IT500 Family to Improve the Input Bias Current of BIFET OPAMPS

1

INTRODUCTION

The LF156 family of BIFET OPAMPS is very popular because of the combination of high slew rate (typically $12V/\mu s$ @ unity gain) and moderate offset voltage (about $2mV$). Input bias current, however, varies directly with input voltage; rising from $30pA$ @ $V_{IN} = -10V$, to $50pA$ @ $V_{IN} = 0V$, and finally to $80pA$ @ $V_{IN} = +10V$. This can be improved markedly by using one of the IT500 series to drive the inputs of the LF156.

The IT500, like the others in its family, is a dual cascoded n-channel JFET pair, featuring a typical input bias current of $<1pA$ with inputs ranging from $-15V$ to $+15V$; actual I_B is guaranteed to be less than $5pA$ @ $V_{DG} = 50V$.

Figure 1 shows an IT500 being used to drive the inputs of an LF156. This greatly reduces the input bias current, and in no way affects the already superior slew rate; the offset voltage is not significantly degraded because of the excellent matching of the IT500.

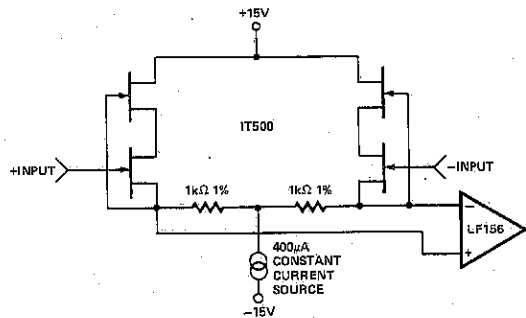

FIGURE 1. INPUT DRIVE CIRCUIT USING IT500

The constant current source can be designed with any transistor pair having a high beta @ $I_C = 400\mu A$. See Figure 2.

An added bonus of the IT500 is its CMRR $> 100dB$, compared to the LF156 CMRR of $85dB$.

This configuration is ideal for electrometer circuits, with good measurement accuracy down to $10pA$ of input current ($< 10\%$ error with $10pA$ of input current). A $10M\Omega$ glass feedback resistor connected between the -INPUT and OPAMP OUTPUT does the trick. Other possible applications include sample and hold amplifiers, instrumentation amplifiers, etc.

Although this application note has dealt solely with the LF156, all present day BIFET OPAMPS exhibit the same I_{BIAS} vs. V_{IN} dependency, and all will benefit from using the IT500 as a preamplifier.

FEATURES

- Low Insertion Loss
- No Offset or Error Generated by Closed Switch
 - Purely Resistive
 - High Isolation Resistance from Driver
- Short Sample and Hold Aperture Time
- Fast Switching

APPLICATIONS

- Analog Switches
- Choppers
- Commutators

LM114/H, LM114A/AH Monolithic Dual NPN Transistor

GENERAL DESCRIPTION

These devices contain a pair of junction-isolated NPN transistors fabricated on a single silicon substrate. This monolithic structure makes possible extremely tight parameter matching at low cost. Further, advanced processing techniques yield exceptionally high current gains at low collector currents, virtual elimination of "popcorn noise," low leakages and improved long-term stability.

Although designed primarily for high breakdown voltage and exceptional DC characteristics, these transistors have surprisingly good high-frequency performance. The gain-bandwidth product is 300MHz with 1mA collector current and 5V collector-base voltage and 22MHz with 10 μ A collector current. Typical collector-base capacitance is only 1.6 pF at 5V.

ABSOLUTE MAXIMUM RATINGS

($T_A = 25^\circ\text{C}$ unless otherwise noted)

Collector-Base Voltage (1)	45V
Collector-Emitter Voltage (1)	45V
Collector-Collector Voltage	45V
Emitter-Base Voltage (1)	6V
Collector Current (1)	20mA
Storage Temperature Range	-65 $^\circ\text{C}$ to +200 $^\circ\text{C}$
Operating Temperature Range	-55 $^\circ\text{C}$ to +150 $^\circ\text{C}$
Lead Temperature (Soldering, 10 sec.)	+300 $^\circ\text{C}$
Power Dissipation	800mW
Derate above 25 $^\circ\text{C}$	14mW/ $^\circ\text{C}$

FEATURES

- Low offset voltage
- Low drift
- High current gain
- Tight beta match
- High breakdown voltage
- Matching guaranteed over a 0V to 45V collector-base voltage range
- CMRR > 100 dB

1

ELECTRICAL CHARACTERISTICS (Note 2)

*When ordering wafer/dice refer to Appendix B-23.

PARAMETER	MAXIMUM LIMITS		UNITS	CONDITIONS
	LM114A, AH	LM114, H		
Offset Voltage	0.5	2.0	mV	$1\mu\text{A} \leq I_C \leq 100\mu\text{A}$
Offset Current	2.0	10	nA	$I_C = 10\mu\text{A}$
	0.5			
Bias Current	20	40	nA	$I_C = 10\mu\text{A}$
				$I_C = 1\mu\text{A}$
				$I_C = 1\mu\text{A}$
Offset Voltage Change	0.2	1.5	mV	$0\text{V} \leq V_{CB} \leq V_{MAX}, I_C = 10\mu\text{A}$
Offset Current Change	1.0	4.0	nA	
Offset Voltage Drift	2.0	10	$\mu\text{V}/^\circ\text{C}$	
Offset Current	12	50	nA	$-55^\circ\text{C} \leq T_A \leq +125^\circ\text{C}, I_C = 10\mu\text{A}$
Bias Current	60	150	nA	
Collector-Base Leakage Current	10	50	pA	$V_{CB} = V_{MAX}$
	$T_A = 125^\circ\text{C}$	10	50	nA
Collector-Emitter Leakage Current	50	200	pA	$V_{CE} = V_{MAX}, V_{EB} = 0\text{V}$
	$T_A = 125^\circ\text{C}$	50	200	nA
Collector-Collector Leakage Current	100	300	pA	$V_{CC} = V_{MAX}$
	$T_A = 125^\circ\text{C}$	100	300	nA

Note 1: Per transistor.

Note 2: These specifications apply for $T_A = +25^\circ\text{C}$ and $0\text{V} \leq V_{CB} \leq V_{MAX}$, unless otherwise specified. For the LM114 and LM114A, $V_{MAX} = 30\text{V}$.

M116

Diode Protected N-Channel Enhancement Mode MOSFET

FEATURES

- Low I_{GSS}
- Integrated Zener Clamp for Gate Protection

U304-U306 P-Channel JFET

FEATURES

- Low ON Resistance
- $I_{D(off)} < 500$ pA
- Switches directly from T²L Logic (U306)

1

APPLICATIONS

- Analog Switches
- Commutators
- Choppers

ABSOLUTE MAXIMUM RATINGS

NOTES:

1. Due to symmetrical geometry these units may be operated with source and drain leads interchanged.
2. Pulse test pulsewidth = 300 μs , duty cycle $\leq 3\%$.

FEATURES

- Industry Standard Part in Low Cost Plastic Package
- High Power Gain
- Low Noise
- Dynamic Range Greater than 100 dB
- Easily Matched to 75Ω Input

ABSOLUTE MAXIMUM RATINGS

($T_A = 25^\circ\text{C}$ unless otherwise noted)

Gate-Drain or Gate-Source Voltage -25V

ELECTRICAL CHARACTERISTICS (25° C. unless otherwise noted)

N-Channel VCR FETs

Parameter	VCR2N		VCR4N		VCR7N		Unit	Test Conditions
	Min	Max	Min	Max	Min	Max		
I_{gss} Gate Reverse Current		-5	-0.2	-0.1			nA	$V_{GS} = -15V, V_{DS} = 0$
BV_{GSS} Gate-Source Breakdown Voltage	-15		-15		-15		V	$I_G = -1 \mu A, V_{DS} = 0$
$V_{GS(off)}$ Gate-Source Cutoff Voltage	-3.5	-7	-3.5	-7	-2.5	-5		$I_D = 1 \mu A, V_{DS} = 10V$
$r_{ds(on)}$ Drain Source ON Resistance	20	60	200	600	4,000	8,000	Ω	$V_{GS} = 0, I_D = 0$ f = 1 kHz
C_{dgo} Drain-Gate Capacitance		7.5		3		1.5	pF	$V_{GD} = -10V, I_S = 0$ f = 1 MHz
C_{sgo} Source-Gate Capacitance		7.5		3		1.5	pF	$V_{GS} = -10V, I_D = 0$

P-Channel VCR FETs

Parameter	VCR3P		Unit	Test Conditions
	Min	Max		
I_{gss} Gate Reverse Current		20	nA	$V_{GS} = 15V, V_{DS} = 0$
BV_{GSS} Gate-Source Breakdown Voltage	15		V	$I_G = 1 \mu A, V_{DS} = 0$
$V_{GS(off)}$ Gate-Source Cutoff Voltage	3.5	7		$I_D = -1 \mu A, V_{DS} = -10V$
$r_{ds(on)}$ Drain-Source ON Resistance	70	200	Ω	$V_{GS} = 0, I_D = 0$ f = 1 kHz
C_{dgo} Drain-Gate Capacitance		6	pF	$V_{GD} = 10V, I_S = 0$ f = 1 MHz
C_{sgo} Source-Gate Capacitance		6	pF	$V_{GS} = 10V, I_D = 0$

JFETS AS VOLTAGE CONTROLLED RESISTORS

The voltage controlled resistor is a junction field effect transistor whose drain to source ON resistance is controlled by gate to source voltage.

The gate control terminal is high impedance thereby allowing negligible control current. The gate voltage is zero for minimum resistance, and increases as the gate voltage approaches the pinch-off voltage.

This VCR is intended for use on applications using low level AC signals. Figure 1 shows the output characteristics, with an enlarged graph of $V_{DS} = 0$ for AC signals with no DC component. Operation is in the first and third quadrants; the device will operate in the first quadrant only if a constant current is applied to the drain and the input signal level is kept low.

Figure 1 also shows that certain combinations of gate control voltage and signal levels will cause resistance modulation. This distortion may be improved by introducing local feedback as shown in figure 2 for best frequency response and impedance levels; eliminating the feedback capacitor will require the gate control voltage to be double for the same ON resistance. The resistor values should be equal, and about 100k Ω .

Best gate control voltage for best linearity is up to about 0.8V P_{PK} ; ON resistance increases rapidly beyond this point.
