## **R7912/P7001 CHECKOUT SOFTWARE**

### **Introduction**

Both the R7912 and P7001 Checkout Software packages are now supplied on a single disk or diskette. Two manuals are provided, one for each package. The R7912 Checkout Software manual includes loading instructions for the new media in the main body of the manual, but the P7001 Checkout Software manual may have update pages in the back. Check there for loading instructions.

### **Description**

Two files are resident on the supplied disk or diskette:

**R7912** verifies proper operation of the R7912 using either UNIBUS<sup>R</sup> or Q-BUS controllers such as the TEKTRONIX CP1100 or CP4100 series.

**P70065** verifies proper operation of the P7001 Digitizer using either CP1100 or CP4100 series controllers.

### **Using the Software**

First, determine your controller type. TEKTRONIX CP1100 series controllers are functionally identical to Digital Equipment Corp. PDP-11 series from the PDP-11/04 through PDP-11/45. CP4100 series controllers are similar to Digital Equipment Corp. PDP-11/03 (Q-BUS) controllers.

Select the Checkout Software instruction manual that applies to your instrument. Look in the back for changed or updated information about loading and running the software. Follow the instructions provided in the manual for running the various tests. Good luck.
